C6 · PHASE 1 · SET UP THE STORE WITH GENAI · TOPIC 2 · 25 MIN

Lab 1 — Launch Harbour & Co — WooCommerce Plus an AI-Designed Homepage

Build a Professional eCommerce Store with Generative AI · LO1

> Install WooCommerce, run the wizard, then let ChatGPT design the homepage you publish.

The business scenario

Rachel Lim has a WordPress site and a studio shop, but no online store. Today you install WooCommerce, set Singapore dollars and 9% GST the way her accountant wants, give her shop manager the right role, and publish a homepage that ChatGPT designs from the Harbour & Co brand brief.

You will deliver

- WooCommerce installed and the setup wizard completed for Harbour & Co
- Store address, S$ currency and 9% GST (prices inclusive) saved
- Storefront theme and the Harbour & Co Toolkit plugin active
- An AI-designed homepage published and set as the front page
- A Shop manager user for Daniel Koh — the permissions policy in action

Who does what

AI does — ChatGPT writes the homepage copy and the page layout as WordPress-ready HTML.

You decide — You choose the layout, check every claim against the brand brief, and decide who may publish.

OBJECTIVE

Set up and monitor a WooCommerce CMS so it follows the store's guidelines, policies and permissions.

Before you start

- Your demo WordPress site — log in at **/wp-admin** with **trainingN@tertiaryinfotech.com, where N is your site number (wp3 → training3@tertiaryinfotech.com)** and password **given by your trainer**.
- ChatGPT (https://chatgpt.com) — a free account works; image generation may be slower on the free tier.

Site	Login page	Username	Password
wp1	`https://wp1.tertiarytraining.com/wp-admin`	`training1@tertiaryinfotech.com`	`given by your trainer`
wp2	`https://wp2.tertiarytraining.com/wp-admin`	`training2@tertiaryinfotech.com`	`given by your trainer`
wp3	`https://wp3.tertiarytraining.com/wp-admin`	`training3@tertiaryinfotech.com`	`given by your trainer`

wp4	https://wp4.tertiarytraining.com/wp-admin	training4@tertiaryinfotech.com	given by your trainer
wp5	https://wp5.tertiarytraining.com/wp-admin	training5@tertiaryinfotech.com	given by your trainer

WordPress plugins and themes used

Plugin / theme	Where to get it
WooCommerce	Plugins > Add Plugin > search 'WooCommerce' (by Automattic)
Storefront theme	Appearance > Themes > Add New Theme > search 'Storefront'
Harbour & Co Toolkit	Plugins > Add Plugin > Upload Plugin > plugin/harbour-co-toolkit.zip

In this folder

File	What it is
data/brand-brief.txt	The Harbour & Co brand brief — attach it to every ChatGPT chat
data/store-setup-sheet.txt	Every value you enter in the wizard and Settings
plugin/harbour-co-toolkit.zip	WordPress plugin: brand styles, Harbour & Co block patterns, block editor for products
plugin/harbour-co-toolkit/	The plugin's source code (read it — it is one PHP file and one CSS file)
templates/harbour-home.html	Reference homepage (what a good AI answer looks like) — paste into a Custom HTML block
templates/harbour-about.html	Reference About Us page
assets/images/harbour-co-logo-light.png	Logo for the navy header (Appearance > Customize > Site Identity)
assets/images/harbour-co-logo.png	Logo for light backgrounds (emails, documents)
assets/images/hero-resort-linen.jpg	Homepage hero image

Step by step

1. Log in to your demo site

Browser

Open your assigned site's /wp-admin page and sign in. Your username is trainingN@tertiaryinfotech.com, where N is your site number. The demo hosting already meets the WooCommerce requirements (PHP 7.2+, MySQL 5.6+ or MariaDB 10.0+, 128 MB memory, HTTPS).

```
https://wp1.tertiarytraining.com/wp-admin  →  training1@tertiaryinfotech.com  ·  password from your trainer
(use YOUR site number: wp2 → training2@…, wp3 → training3@…)
```

2. Install and activate WooCommerce

Plugins > Add Plugin

Search for WooCommerce. Check the author is Automattic, click Install Now, then Activate.

```
Plugins > Add Plugin > search: WooCommerce > Install Now > Activate
```

✓ The 'Welcome to Woo!' setup wizard opens.

3. Run the setup wizard for Harbour & Co

WooCommerce setup wizard

Click Set up my store. Answer 'Which one of these best describes you?' with I'm already selling, then fill in 'Tell us a bit about your store'. On 'Get a boost with our free features' click Skip this step — we add our own plugins.

```
Store name: Harbour & Co  ·  Industry: Clothing and accessories  ·  Location: Singapore
```

✓ You land on WooCommerce > Home with a setup task list.

4. Set the address, selling location and currency

WooCommerce > Settings > General

Enter the studio address, sell to Singapore only, set the default customer location to the shop base (otherwise visitors whose location is unknown see prices without GST), tick Enable taxes, and set the currency options. Save changes.

```
71 Ayer Rajah Crescent · #02-18 · Singapore · 139951
Selling location(s): Sell to specific countries → Singapore
Default customer location: Shop country/region · Enable taxes ✓
Currency: Singapore dollar ($) — SGD · Position: Left · Thousand separator , · Decimal separator . · Decimals: 2
```

✓ A Tax tab appears beside General.

5. Enter prices inclusive of 9% GST

WooCommerce > Settings > Tax

Choose 'Yes, I will enter prices inclusive of tax' and save. Open Standard rates, click Insert row and add the Singapore GST rate. Every price you type from now on already contains GST.

```
Country code: SG · Rate %: 9.0000 · Tax name: GST · Priority: 1 · Shipping: ticked
```

6. Apply the Storefront theme

Appearance > Themes > Add New Theme

Search for Storefront, Install, then Activate. Storefront is the official WooCommerce theme.

7. Upload the Harbour & Co Toolkit plugin

Plugins > Add Plugin > Upload Plugin

Choose plugin/harbour-co-toolkit.zip from this lab folder, click Install Now, then Activate Plugin. It adds the brand colours and Lato font, a 'Harbour & Co' block-pattern category, shows SGD prices as S$ (WooCommerce's default symbol is a plain $), and offers an optional block editor for products (Settings > Harbour & Co) so the WordPress AI tools work on product pages.

✓ Plugins lists 'Harbour & Co Toolkit' as active; prices now read S$.

8. Ask ChatGPT to design the homepage

ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt (paperclip icon) and paste the prompt. Read the answer before you use it.

PROMPT — PASTE INTO CHATGPT

```
ROLE: You are a senior eCommerce web designer who builds WooCommerce storefronts.
CONTEXT: The attached brand brief describes Harbour & Co, a Singapore fashion label. The site
runs WordPress with the Storefront theme. The page will go inside ONE WordPress 'Custom HTML'
block.
TASK: Write the homepage as a single self-contained HTML snippet with these sections in order:
1. Hero — headline, one-line pitch, two buttons: 'Shop Resort Linen' (/product-category/apparel/)
and 'Our story' (/about-us/)
2. Three collection cards — The Everyday Edit, Resort Linen, Layers — one sentence each
3. A trust bar — free delivery above S$100, 14-day returns, PayNow and card, studio pickup
4. A short founder note from Rachel Lim (3 sentences)
CONSTRAINTS: Use only inline CSS in a <style> block scoped to a .hc-home wrapper. Colours
#1B2A41, #5FA8A0, #EFE6D8, #E4774F; font Lato. No JavaScript, no external images, no
<html>/<head>/<body> tags. Mobile-friendly (stack cards under 700px). Use British spelling.
Prices in S$ including 9% GST. Do not invent facts, reviews, awards or sustainability claims.
FORMAT: One HTML code block, then a 3-bullet list of any claim I should double-check.
```

✓ One HTML code block plus a short list of claims to verify. Compare yours with templates/harbour-home.html.

9. Publish the homepage

Pages > Add Page

Title the page Home. Click + (block inserter), add a Custom HTML block and paste the HTML. Then click + again > Patterns > Harbour & Co and insert 'New arrivals grid' below it — it lists your newest products automatically. In the Page sidebar set Template: Full width. Publish.

```
Block: Custom HTML (paste AI answer)  +  Pattern: Harbour & Co > New arrivals grid  ·
Template: Full width
```

10. Make it the front page

Settings > Reading

Under 'Your homepage displays' choose A static page and pick Home. Save changes, then view the site.

```
Your homepage displays: A static page · Homepage: Home · Posts page: — Select —
```

11. Add the logo and the main menu

Appearance > Customize > Site Identity · Appearance > Menus

Upload assets/images/harbour-co-logo-light.png as the Logo (the header is navy) and Publish. Then create a menu called Main menu with Home, Shop and About Us, tick Display location: Primary Menu, and Save Menu — otherwise Storefront lists every page, including Cart and Sample Page.

```
Main menu → Home · Shop · About Us   ·   Display location: Primary Menu
```

12. Give the shop manager the right role

Users > Add User

Add Daniel Koh with the Shop manager role. A Shop manager can run products, orders and coupons but cannot install plugins or change users — that is your permissions policy.

```
Username: daniel.koh · Email: daniel.koh@harbourandco.example · Role: Shop manager
```

✓ Users lists two people: you (Administrator) and Daniel Koh (Shop manager).

Prompt Playbook — Step → Prompt → Step → Prompt

The whole lab on one page. YOU steps happen in WordPress; AI steps are prompts you paste into ChatGPT (copy them from `COPY-PROMPTS.txt` or the Lab Prompts page). Attach `data/brand-brief.txt` before the first prompt.

- YOU · STEP 1 **Log in to your demo site** — Browser
- YOU · STEP 2 **Install and activate WooCommerce** — Plugins > Add Plugin
- YOU · STEP 3 **Run the setup wizard for Harbour & Co** — WooCommerce setup wizard
- YOU · STEP 4 **Set the address, selling location and currency** — WooCommerce > Settings > General
- YOU · STEP 5 **Enter prices inclusive of 9% GST** — WooCommerce > Settings > Tax
- YOU · STEP 6 **Apply the Storefront theme** — Appearance > Themes > Add New Theme
- YOU · STEP 7 **Upload the Harbour & Co Toolkit plugin** — Plugins > Add Plugin > Upload Plugin
- AI · STEP 8 **Ask ChatGPT to design the homepage**

```
ROLE: You are a senior eCommerce web designer who builds WooCommerce storefronts.
CONTEXT: The attached brand brief describes Harbour & Co, a Singapore fashion label. The site runs WordPress with the Storefront theme. The page will go inside ONE WordPress 'Custom HTML' block.
TASK: Write the homepage as a single self-contained HTML snippet with these sections in order:
1. Hero — headline, one-line pitch, two buttons: 'Shop Resort Linen' (/product-category/apparel/) and 'Our story' (/about-us/)
2. Three collection cards — The Everyday Edit, Resort Linen, Layers — one sentence each
3. A trust bar — free delivery above S$100, 14-day returns, PayNow and card, studio pickup
4. A short founder note from Rachel Lim (3 sentences)
CONSTRAINTS: Use only inline CSS in a <style> block scoped to a .hc-home wrapper. Colours #1B2A41, #5FA8A0, #EFE6D8, #E4774F; font Lato. Do not invent facts, reviews, awards or sustainability claims.
FORMAT: One HTML code block, then a 3-bullet list of any claim I should double-check.
```

✓ One HTML code block plus a short list of claims to verify. Compare yours with templates/harbour-home.html.

- YOU · STEP 9 **Publish the homepage** — Pages > Add Page
- YOU · STEP 10 **Make it the front page** — Settings > Reading
- YOU · STEP 11 **Add the logo and the main menu** — Appearance > Customize > Site Identity · Appearance > Menus
- YOU · STEP 12 **Give the shop manager the right role** — Users > Add User

Checkpoint

Your site's front page shows the Harbour & Co homepage, prices display in S$, and Users lists Daniel Koh as Shop manager.

- □ WooCommerce > Settings > General shows the Ayer Rajah address, Singapore dollar and shop-base customer location
- □ Tax > Standard rates has SG · 9% · GST, and prices are entered inclusive of tax
- □ Storefront and Harbour & Co Toolkit are active
- □ The front page is the AI-designed Home page with the New arrivals grid
- □ Daniel Koh is a Shop manager, not an Administrator

Troubleshooting

Symptom	Fix

The wizard did not open	Go to WooCommerce > Home; the task list carries the same steps. Or open WooCommerce > Settings directly.
Prices show without GST (e.g. $42.11 instead of $45.90)	Set WooCommerce > Settings > General > Default customer location to 'Shop country/region'.
Upload Plugin says 'The link you followed has expired'	The zip is larger than the upload limit — ask the trainer, or upload via the Activities folder link on the LMS.
The HTML shows as text on the page	You pasted into a Paragraph block. Delete it and paste into a Custom HTML block.
'This block contains unexpected or invalid content'	Click Attempt recovery, or insert the pattern again from + > Patterns > Harbour & Co.

Stretch challenge

Ask ChatGPT for an About Us page that meets E-E-A-T (founder byline, first-hand story, real address) and publish it at /about-us/.

Keep your demo site as it is at the end of the lab — the next lab builds on this work.
