DOCUMENT VERSION CONTROL RECORD

Version Number	Effective Date of Release	Summary of Included Changes	Author
1.0	28 September 2026	First release as 'AI Powered Wordpress eCommerce': one day, five topics and seven Markdown labs on WordPress and WooCommerce.	Dr. Alfred Ang
2.0	4 November 2026	Course retitled 'Build a Professional eCommerce Store with Generative AI'. Courseware rebuilt on the v16 eCommerce syllabus: seven topics and seven Generative-AI labs for Harbour & Co, a Singapore fashion label, each lab in its own folder with an instructions PDF, a Prompt Playbook page, copy-ready prompts, mock data, product images and templates, and the Harbour & Co Toolkit plugin. Day re-timed to 9:30am – 5:30pm, 7.5 instructional hours with a 30-minute lunch.	Dr. Alfred Ang
2.1	5 November 2026	Topics restructured to five, each split into numbered sub-topics: 1 Overview of AI for eCommerce Store, 2 Manage Products with AI, 3 Manage Payments and Shipping with AI, 4 Manage Sales with AI, 5 Manage Store Performance with AI. The Generative-AI material (AI tools, AI-drafted policies and customer replies, SEO in the age of AI search, AI campaign measurement) now sits inside the topic it serves; new sub-topic 2.4 Product Shipping Classes. Five labs, one per topic: Lab 2 now shoots, writes and imports the new-season catalogue, and Lab 5 covers the SEO and the Resort Linen campaign. Each lab runs 25 minutes at the end of its topic; the day stays 9:30am – 5:30pm, 7.5 instructional hours with a 30-minute lunch.	Dr. Alfred Ang

Introduction

This Learner Guide accompanies the course Build a Professional eCommerce Store with Generative AI (C6), conducted by Tertiary Infotech Academy Pte Ltd. It is a one-day course, 9:30am – 5:30pm, with 7.5 instructional hours.

You will build one online store from an empty WordPress site, with Generative AI as your co-worker: set the store up (Labs 1–4), then get it found in search and market its launch (Lab 5) — one lab per topic. AI drafts the homepage, product photos and copy, the catalogue CSV, the policies, the SEO and the campaign; you check every fact and approve anything public.

This guide holds the full step-by-step instructions and every prompt. Each lab also has its own folder (labs/lab-NN-…/) with an instructions PDF, COPY-PROMPTS.txt, data, product assets and templates. Keep this guide — it lets you repeat every lab after the class.

Course Learning Outcomes

On completion of this course, you will be able to:

- LO1: Set up and monitor WooCommerce CMS to ensure adherence to guidelines and policies.
- LO2: Edit and curate a product website on WooCommerce CMS.
- LO3: Maintain product web content on WooCommerce CMS.
- LO4: Recommend payment and shipping methods on WooCommerce CMS to improve customer experience.
- LO5: Manage issues related to WooCommerce CMS such as sales, out-of-stock and promotions.
- LO6: Manage WooCommerce CMS performance.

Course Topics

The course has five topics, each with its own hands-on lab. Each topic is split into numbered sub-topics; the labs run straight after the sub-topic they practise.

Topic	Sub-topics	Labs
Topic 1 — Overview of AI for eCommerce Store (Lab 1 · LO1)	1.1 Generative AI Tools for WooCommerce; 1.2 Setup WooCommerce CMS; 1.3 Configure WooCommerce Themes; 1.4 WooCommerce Settings and Options	Lab 1
Topic 2 — Manage Products with AI (Lab 2 · LO2, LO3)	2.1 Adding and Managing Products; 2.2 Adding Product Images and Galleries; 2.3 Variable Product; 2.4 Product Shipping Classes; 2.5 Managing Product Categories, Tags and	Lab 2

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	Attributes; 2.6 Digital/Downloadable Product Handling; 2.7 Set up Related Products, Up-Sells and Cross-Sells; 2.8 Product CSV Importer and Exporter; 2.9 WooCommerce Customizer; 2.10 WooCommerce Blocks	
Topic 3 — Manage Payments and Shipping with AI (Lab 3 · LO4)	3.1 Payment Methods; 3.2 Shipping Options; 3.3 Store Policies Drafted with AI	Lab 3
Topic 4 — Manage Sales with AI (Lab 4 · LO5)	4.1 Manage Orders and Issues; 4.2 Manage Refund; 4.3 Manage Coupon and Promotion; 4.4 Customer Replies Drafted with AI	Lab 4
Topic 5 — Manage Store Performance with AI (Lab 5 · LO6)	5.1 Sales Reports; 5.2 Dashboard Widgets; 5.3 Google Analytics Integration; 5.4 Search Performance: SEO in the Age of AI Search; 5.5 Campaign Performance: AI Marketing That Measures Itself	Lab 5

Before You Start — Setting Up for the Hands-On Labs

Log in to your demo training site

The trainer assigns each learner one demo WordPress site. Open its /wp-admin page and sign in. The sites are reset before every class, so experiment freely — never use them for a real shop.

Site	Login page	Username	Password
wp1	https://wp1.tertiarytraining.com/wp-admin	training1@tertiaryinfotech.com	given by your trainer
wp2	https://wp2.tertiarytraining.com/wp-admin	training2@tertiaryinfotech.com	given by your trainer
wp3	https://wp3.tertiarytraining.com/wp-admin	training3@tertiaryinfotech.com	given by your trainer
wp4	https://wp4.tertiarytraining.com/wp-admin	training4@tertiaryinfotech.com	given by your trainer
wp5	https://wp5.tertiarytraining.com/wp-admin	training5@tertiaryinfotech.com	given by your trainer

What else you need

- A ChatGPT account (https://chatgpt.com). The free tier works; image generation may be slower.
- A laptop with a modern browser, plus a private/incognito window to view the store as a customer.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- The labs/ folder from the LMS or the course repository — one folder per lab.
- The demo hosting meets WooCommerce's requirements (PHP 7.2+, MySQL 5.6+ / MariaDB 10.0+, 128 MB memory, HTTPS). The labs were tested on WordPress 7.1.4, WooCommerce 11.2.1 and Storefront 4.6.2.

WordPress plugins and themes used in the labs

Plugin / theme	Lab	Where to get it
WooCommerce	1	Plugins > Add Plugin > 'WooCommerce' by Automattic
Storefront theme	1	Appearance > Themes > Add New Theme
Harbour & Co Toolkit	1	Plugins > Add Plugin > Upload Plugin > labs/lab-01-…/plugin/harbour-co-toolkit.zip
All in One SEO	5	Plugins > Add Plugin > 'All in One SEO'
MailPoet	5	Plugins > Add Plugin > 'MailPoet'

The store you will build — Harbour & Co

Harbour & Co is a Singapore fashion label selling breathable city wear — linen shirts, polos, tees, skirts, trousers and accessories — from a studio shop at 71 Ayer Rajah Crescent. The founder, Rachel Lim, wants to sell online before the Resort Linen season launches. You are her eCommerce lead for the day: set the store up with Generative AI, get it found in search, then market the launch.

- Phase 1 · Set up the store with GenAI (Labs 1–4) — WooCommerce, an AI-designed homepage, AI product photos and copy, an AI-built catalogue, AI-drafted policies, and the orders that follow.
- Phase 2 · Get found and get customers with GenAI (Lab 5) — Keyword research and meta text applied in All in One SEO, then social posts, a MailPoet newsletter and a tracked campaign coupon — and the numbers that prove it worked.

The brand brief — attach it to every ChatGPT chat

```
HARBOUR & CO — BRAND BRIEF (paste or attach this in every ChatGPT chat)
======================================================================
Who we are   Harbour & Co is a Singapore fashion label founded in 2019 by
Rachel Lim.
             We make breathable city wear for the tropics: clothes that survive
a hot
             commute and a cold office on the same day.
Studio shop  71 Ayer Rajah Crescent, #02-18, Singapore 139951 · open Tue–Sun,
11am–7pm
Online store WooCommerce on WordPress (the store you build today)
Email        hello@harbourandco.example

Customers    Singapore professionals aged 25–40. They walk between MRT, office
and

             14-day returns on unworn items with tags · PayNow, bank transfer,
card
Must never   Claim "100% sustainable", "eco-friendly" or medical/cooling
benefits we
             cannot prove · name competitors · invent reviews or awards.
```

Conventions used in every lab

- Menu paths are written as they appear in the WordPress sidebar, e.g. WooCommerce > Settings > General.
- Shaded boxes hold the exact values to enter. Dark boxes are prompts — paste them into ChatGPT.
- Click Save changes after every settings screen; WooCommerce never saves automatically.
- AI drafts, you approve: check every fact against the brief or spec before it goes on the store.

Note: Every AI answer is a draft. Policies, prices and claims on a real store are your responsibility — the owner signs them off.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Topic 01 — Overview of AI for eCommerce Store (Lab 1 · LO1)

Install WooCommerce, price in S$ with 9% GST, and let AI design the homepage.

1.1 Generative AI Tools for WooCommerce

Added to this course: The AI co-worker for every lab.

- Choosing an AI tool — ChatGPT for content and images, Gemini for SEO and long files, Claude for long, careful writing.
- Model tiers — Each provider runs fast, budget models and heavy-duty ones; match the tier to the job.
- Effective prompts — Role, context, task, constraints and output format, with the brand brief attached.
- WordPress AI Connectors — Settings > Connectors (WordPress 7.0+) stores one Anthropic, Google or OpenAI key for every AI plugin.
- AI in the editor — Settings > AI turns on image generation, alt text and title suggestions; WooCommerce products still open in the classic editor.

1.2 Setup WooCommerce CMS

With AI: Run the setup wizard with Harbour & Co's answers.

- What WooCommerce is — An open-source eCommerce plugin by Automattic that turns WordPress into a store.
- Six steps to a store — Hosting, WordPress, a theme, the WooCommerce plugin, the setup wizard, then extensions.
- System requirements — PHP 7.2+, MySQL 5.6+ or MariaDB 10.0+, a 128 MB WordPress memory limit and HTTPS.
- Install and the wizard — Plugins > Add Plugin > WooCommerce > Activate; the wizard asks store name, industry and location.
- Taxonomies and post types — WooCommerce adds products, orders and product categories, tags and attributes to WordPress.

1.3 Configure WooCommerce Themes

With AI: An AI-written homepage in a Custom HTML block.

- Themes — Storefront is WooCommerce's own theme; third-party themes trade flexibility for support and speed.
- Widgets and shortcodes — Widgets surface products and filters in sidebars and footers; shortcodes such as [products] place store content in any page.
- AI output to a page — Paste AI HTML into a Custom HTML block, insert a block pattern, or paste Markdown that turns into blocks.
- The toolkit plugin — The Harbour & Co Toolkit adds brand styles and five block patterns: hero, collections, new arrivals, trust bar, policy links.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

1.4 WooCommerce Settings and Options

With AI: Set S$, 9% GST and the roles that keep AI drafts in check.

- WooCommerce > Settings — General, Products, Tax, Shipping, Payments, Accounts & Privacy, Emails and Advanced tabs.
- Currency and location — Singapore dollar; Default customer location = Shop country/region, so visitors see GST-inclusive prices.
- Tax — Prices entered inclusive of tax; one standard rate: SG, 9%, GST.
- Roles as policy — An Administrator changes settings; a Shop manager runs products, orders and coupons. That split is your content-management policy.

Key Concepts for Lab 1

- WooCommerce turns WordPress into a store: install the plugin, run the setup wizard, then set currency, tax and roles in WooCommerce > Settings.
- Prices are entered inclusive of 9% GST; set Default customer location to the shop base so every visitor sees GST-inclusive prices.
- AI output becomes a WordPress page three ways: a Custom HTML block, block patterns, or pasted Markdown.
- Roles are the permissions policy: an Administrator changes settings; a Shop manager runs products, orders and coupons.

Lab 1 — Launch Harbour & Co — WooCommerce Plus an AI-Designed Homepage

Phase 1 · 25 minutes · LO1 · folder labs/lab-01-launch-harbour-and-co/

Install WooCommerce, run the wizard, then let ChatGPT design the homepage you publish.

Objective: Set up and monitor a WooCommerce CMS so it follows the store's guidelines, policies and permissions.

The business scenario

Rachel Lim has a WordPress site and a studio shop, but no online store. Today you install WooCommerce, set Singapore dollars and 9% GST the way her accountant wants, give her shop manager the right role, and publish a homepage that ChatGPT designs from the Harbour & Co brand brief.

You will deliver

- WooCommerce installed and the setup wizard completed for Harbour & Co
- Store address, S$ currency and 9% GST (prices inclusive) saved
- Storefront theme and the Harbour & Co Toolkit plugin active
- An AI-designed homepage published and set as the front page
- A Shop manager user for Daniel Koh — the permissions policy in action

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Who does what

- AI does — ChatGPT writes the homepage copy and the page layout as WordPress-ready HTML.
- You decide — You choose the layout, check every claim against the brand brief, and decide who may publish.

Plugins and themes

- WooCommerce — Plugins > Add Plugin > search 'WooCommerce' (by Automattic)
- Storefront theme — Appearance > Themes > Add New Theme > search 'Storefront'
- Harbour & Co Toolkit — Plugins > Add Plugin > Upload Plugin > plugin/harbour-co-toolkit.zip

Lab files

File	What it is
data/brand-brief.txt	The Harbour & Co brand brief — attach it to every ChatGPT chat
data/store-setup-sheet.txt	Every value you enter in the wizard and Settings
plugin/harbour-co-toolkit.zip	WordPress plugin: brand styles, Harbour & Co block patterns, block editor for products
plugin/harbour-co-toolkit/	The plugin's source code (read it — it is one PHP file and one CSS file)
templates/harbour-home.html	Reference homepage (what a good AI answer looks like) — paste into a Custom HTML block
templates/harbour-about.html	Reference About Us page
assets/images/harbour-co-logo-light.png	Logo for the navy header (Appearance > Customize > Site Identity)
assets/images/harbour-co-logo.png	Logo for light backgrounds (emails, documents)
assets/images/hero-resort-linen.jpg	Homepage hero image

Step by step

1. Log in to your demo site — Browser

Open your assigned site's /wp-admin page and sign in. Your username is trainingN@tertiaryinfotech.com, where N is your site number. The demo hosting already meets the WooCommerce requirements (PHP 7.2+, MySQL 5.6+ or MariaDB 10.0+, 128 MB memory, HTTPS).

```
https://wp1.tertiarytraining.com/wp-admin   →   training1@tertiaryinfotech.com
·   password given by your trainer
(use YOUR site number: wp2 → training2@…, wp3 → training3@…)
```

2. Install and activate WooCommerce — Plugins > Add Plugin

Search for WooCommerce. Check the author is Automattic, click Install Now, then Activate.

```
Plugins > Add Plugin > search: WooCommerce > Install Now > Activate
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

✓ Expected: The 'Welcome to Woo!' setup wizard opens.

3. Run the setup wizard for Harbour & Co — WooCommerce setup wizard

Click Set up my store. Answer 'Which one of these best describes you?' with I'm already selling, then fill in 'Tell us a bit about your store'. On 'Get a boost with our free features' click Skip this step — we add our own plugins.

```
Store name: Harbour & Co  ·  Industry: Clothing and accessories  ·
Location: Singapore
```

✓ Expected: You land on WooCommerce > Home with a setup task list.

4. Set the address, selling location and currency — WooCommerce > Settings > General

Enter the studio address, sell to Singapore only, set the default customer location to the shop base (otherwise visitors whose location is unknown see prices without GST), tick Enable taxes, and set the currency options. Save changes.

```
71 Ayer Rajah Crescent · #02-18 · Singapore · 139951
Selling location(s): Sell to specific countries → Singapore
Default customer location: Shop country/region · Enable taxes ✓
Currency: Singapore dollar ($) — SGD · Position: Left · Thousand separator , ·
Decimal separator . · Decimals: 2
```

✓ Expected: A Tax tab appears beside General.

5. Enter prices inclusive of 9% GST — WooCommerce > Settings > Tax

Choose 'Yes, I will enter prices inclusive of tax' and save. Open Standard rates, click Insert row and add the Singapore GST rate. Every price you type from now on already contains GST.

```
Country code: SG · Rate %: 9.0000 · Tax name: GST · Priority: 1 · Shipping:
ticked
```

6. Apply the Storefront theme — Appearance > Themes > Add New Theme

Search for Storefront, Install, then Activate. Storefront is the official WooCommerce theme.

7. Upload the Harbour & Co Toolkit plugin — Plugins > Add Plugin > Upload Plugin

Choose plugin/harbour-co-toolkit.zip from this lab folder, click Install Now, then Activate Plugin. It adds the brand colours and Lato font, a 'Harbour & Co' block-pattern category, shows SGD prices as S$ (WooCommerce's default symbol is a plain $), and offers an optional block editor for products (Settings > Harbour & Co) so the WordPress AI tools work on product pages.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

✓ Expected: Plugins lists 'Harbour & Co Toolkit' as active; prices now read S$.

8. Ask ChatGPT to design the homepage — ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt (paperclip icon) and paste the prompt. Read the answer before you use it.

PROMPT — paste into ChatGPT

```
ROLE: You are a senior eCommerce web designer who builds WooCommerce
storefronts.
CONTEXT: The attached brand brief describes Harbour & Co, a Singapore fashion
label. The site runs WordPress with the Storefront theme. The page will go
inside ONE WordPress 'Custom HTML' block.
TASK: Write the homepage as a single self-contained HTML snippet with these
sections in order:
1. Hero — headline, one-line pitch, two buttons: 'Shop Resort Linen' (/product-
category/apparel/) and 'Our story' (/about-us/)
2. Three collection cards — The Everyday Edit, Resort Linen, Layers — one
sentence each
3. A trust bar — free delivery above S$100, 14-day returns, PayNow and card,
studio pickup
4. A short founder note from Rachel Lim (3 sentences)
CONSTRAINTS: Use only inline CSS in a <style> block scoped to a .hc-home
wrapper. Colours #1B2A41, #5FA8A0, #EFE6D8, #E4774F; font Lato. No JavaScript,
no external images, no <html>/<head>/<body> tags. Mobile-friendly (stack cards
under 700px). Use British spelling. Prices in S$ including 9% GST. Do not
invent facts, reviews, awards or sustainability claims.
FORMAT: One HTML code block, then a 3-bullet list of any claim I should double-
check.
```

✓ Expected: One HTML code block plus a short list of claims to verify. Compare yours with templates/harbour-home.html.

9. Publish the homepage — Pages > Add Page

Title the page Home. Click + (block inserter), add a Custom HTML block and paste the HTML. Then click + again > Patterns > Harbour & Co and insert 'New arrivals grid' below it — it lists your newest products automatically. In the Page sidebar set Template: Full width. Publish.

```
Block: Custom HTML (paste AI answer)  +  Pattern: Harbour & Co > New arrivals
grid  ·  Template: Full width
```

10. Make it the front page — Settings > Reading

Under 'Your homepage displays' choose A static page and pick Home. Save changes, then view the site.

```
Your homepage displays: A static page · Homepage: Home · Posts page: — Select —
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

11. Add the logo and the main menu — Appearance > Customize > Site Identity · Appearance > Menus

Upload assets/images/harbour-co-logo-light.png as the Logo (the header is navy) and Publish. Then create a menu called Main menu with Home, Shop and About Us, tick Display location: Primary Menu, and Save Menu — otherwise Storefront lists every page, including Cart and Sample Page.

```
Main menu → Home · Shop · About Us   ·   Display location: Primary Menu
```

12. Give the shop manager the right role — Users > Add User

Add Daniel Koh with the Shop manager role. A Shop manager can run products, orders and coupons but cannot install plugins or change users — that is your permissions policy.

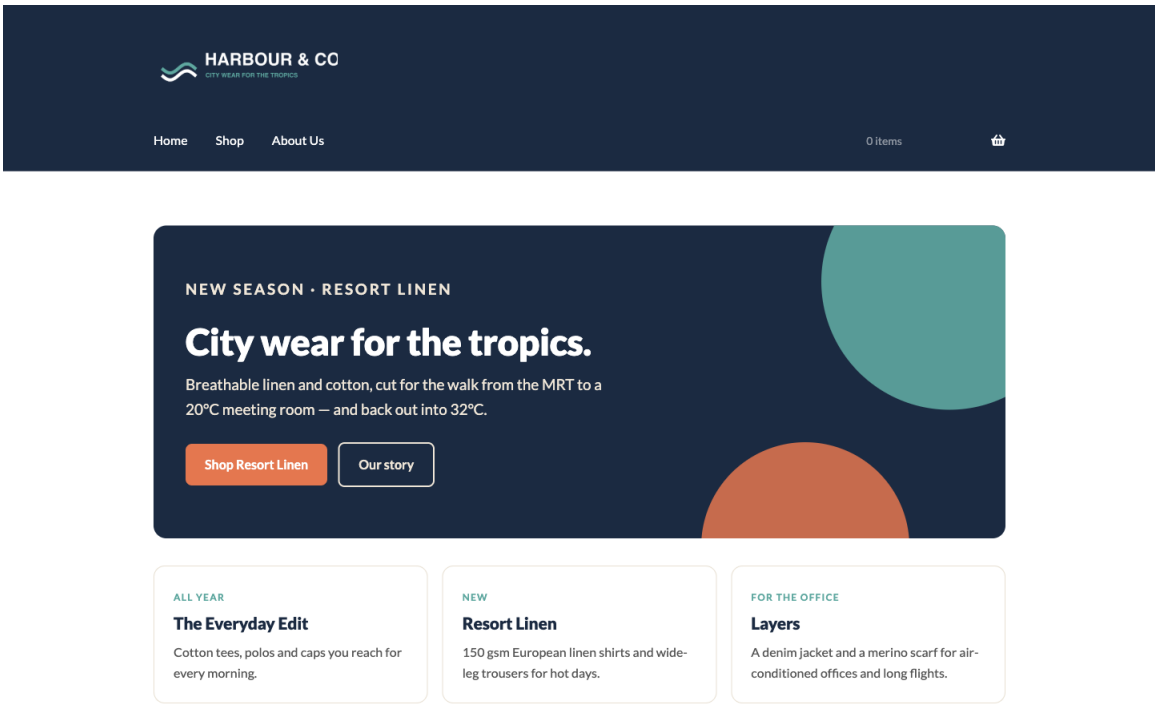

```
Username: daniel.koh · Email: daniel.koh@harbourandco.example · Role: Shop manager
```

✓ Expected: Users lists two people: you (Administrator) and Daniel Koh (Shop manager).

Prompt Playbook — step → prompt → step → prompt

- Step 1 · YOU · Log in to your demo site
- Step 2 · YOU · Install and activate WooCommerce
- Step 3 · YOU · Run the setup wizard for Harbour & Co
- Step 4 · YOU · Set the address, selling location and currency
- Step 5 · YOU · Enter prices inclusive of 9% GST
- Step 6 · YOU · Apply the Storefront theme
- Step 7 · YOU · Upload the Harbour & Co Toolkit plugin
- Step 8 · AI PROMPT · Ask ChatGPT to design the homepage
- Step 9 · YOU · Publish the homepage
- Step 10 · YOU · Make it the front page
- Step 11 · YOU · Add the logo and the main menu
- Step 12 · YOU · Give the shop manager the right role

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

The Harbour & Co homepage after Lab 1 (docker test store).

Checkpoint

Your site's front page shows the Harbour & Co homepage, prices display in S$, and Users lists Daniel Koh as Shop manager.

- □ WooCommerce > Settings > General shows the Ayer Rajah address, Singapore dollar and shop-base customer location
- □ Tax > Standard rates has SG · 9% · GST, and prices are entered inclusive of tax
- □ Storefront and Harbour & Co Toolkit are active
- □ The front page is the AI-designed Home page with the New arrivals grid
- □ Daniel Koh is a Shop manager, not an Administrator

Troubleshooting

Symptom	Fix
The wizard did not open	Go to WooCommerce > Home; the task list carries the same steps. Or open WooCommerce > Settings directly.
Prices show without GST (e.g. $42.11 instead of $45.90)	Set WooCommerce > Settings > General > Default customer location to 'Shop country/region'.
Upload Plugin says 'The link you followed has expired'	The zip is larger than the upload limit — ask the trainer, or upload via the Activities folder link on the LMS.
The HTML shows as text on the page	You pasted into a Paragraph block. Delete it and paste into a Custom HTML block.
'This block contains unexpected or invalid content'	Click Attempt recovery, or insert the pattern again from + > Patterns > Harbour & Co.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Stretch challenge

Ask ChatGPT for an About Us page that meets E-E-A-T (founder byline, first-hand story, real address) and publish it at /about-us/.

Activity — Discussion — Content Management Policies for Your Store (15 minutes)

In pairs, consider a store you would run. Decide what content management policies, guidelines and user permissions it needs, and how you would monitor that people actually follow them.

Discussion prompts

- Who should be able to publish a product, and who should only be able to draft one?
- Which WordPress/WooCommerce roles map to those responsibilities?
- What product-content guidelines would you set — image size, description length, mandatory fields?
- Who checks AI-written copy before it goes live, and against which brand rules?

What to produce

A short policy statement: the roles, the content guidelines, and how adherence is monitored.

Note: Write your answer down — you will apply the same reasoning to your own store in the labs.

Topic 02 — Manage Products with AI (Lab 2 · LO2, LO3)

Shoot, write and import the new-season catalogue. AI drafts it; you check every fact.

2.1 Adding and Managing Products

With AI: Spec sheet in, product page out.

- Product types — Simple, grouped, external/affiliate and variable, plus the virtual and downloadable options.
- The Product Data panel — General, Inventory, Shipping, Linked Products and Attributes: where a product's facts live.
- Short and long descriptions — The short description sits beside the price; the long one carries fabric, fit, size and care.
- Catalogue visibility — Shop and search results, shop only, search only, or hidden.

2.2 Adding Product Images and Galleries

With AI: AI flat-lay photos and fact-checked AI copy.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Featured image and gallery — One main image plus a gallery; square images keep the shop grid even.
- Prompt the photo — Square 1:1, flat lay from above, sand linen background, soft daylight, no text, logos or people.
- Fact-check the copy — Keep only what the spec sheet proves; delete 'cooling', 'eco-friendly' and other unprovable claims.
- Alt text — Colour, product and setting in plain words, for screen readers and image search.

2.3 Variable Product

With AI: One polo, every size and colour.

- Attributes used for variations — Add Size and Colour, tick 'Used for variations', then generate the combinations.
- Each variation is its own item — Its own SKU, price, stock and image; a variation with no price cannot be bought.

2.4 Product Shipping Classes

With AI: Group products that cost the same to ship.

- Where classes live — WooCommerce > Settings > Shipping > Classes; assign one in Product data > Shipping.
- How they price — A flat rate can add a cost per class, e.g. bulky or fragile items. Harbour & Co ships everything at one flat rate, so it needs none.

2.5 Managing Product Categories, Tags and Attributes

With AI: A category tree AI can fill from a CSV.

- Categories — Hierarchical (Apparel > Shirts); every product needs one, or it lands in 'Uncategorized'.
- Tags — Flat labels that link products across categories, e.g. resort-linen.
- Global attributes — Products > Attributes: shared Size and Colour terms that power filters and variations.

2.6 Digital/Downloadable Product Handling

With AI: Sell a size guide or lookbook as a file.

- Virtual and downloadable — Virtual needs no shipping; downloadable delivers a file with an optional limit and expiry.
- Settings > Products > Downloadable products — The file download method and the access rules for logged-in customers.

2.7 Set up Related Products, Up-Sells and Cross-Sells

With AI: Raise the order value with linked products.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Up-sells — Shown on the product page as a better or pricier choice: the tee up-sells the polo.
- Cross-sells — Shown in the cart as an add-on: the cap and the tote.
- Related products — Picked automatically from shared categories and tags.

2.8 Product CSV Importer and Exporter

With AI: AI turns supplier notes into an import-ready CSV.

- Import and export — Products > Import / Export creates or updates hundreds of products, variations included.
- Exact headers — Type, SKU, Name, Regular price, Categories, Stock: the AI must use WooCommerce's column names.
- First import — Leave 'Update existing products' unticked; that option skips SKUs not yet in the store.

2.9 WooCommerce Customizer

With AI: Tune the shop page without code.

- Appearance > Customize > WooCommerce — Store notice, product catalogue, product images and checkout options.
- Product catalogue — What the shop page shows first and how products are sorted, per row and per page.

2.10 WooCommerce Blocks

With AI: Put products in any page.

- Product blocks — Show products by category, tag, attribute, rating or newest in any post or page.
- Cart and Checkout blocks — The block-based cart and checkout that new stores use by default.

Key Concepts for Lab 2

- A simple product carries the title, long and short descriptions, price, SKU, stock, category, tags and images.
- Prompt the photo with composition, background, light and what to leave out (text, logos, people).
- AI copy is a draft: keep only facts the spec sheet proves; delete banned or unprovable claims.
- Alt text describes the image for screen readers and image search.

Lab 2 — Shoot, Write and Import the New-Season Catalogue with AI

Phase 1 · 25 minutes · LO2, LO3 · folder labs/lab-02-ai-product-catalogue/

ChatGPT shoots the T-shirt photo, writes its copy and turns Rachel's notes into an import-ready CSV. You check every fact.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Objective: Edit and curate product web content and keep the catalogue consistent through bulk updates on the WooCommerce CMS.

The business scenario

Harbour & Co's best-seller, the Classic Cotton T-Shirt, has no photo and no copy, and the Resort Linen pieces arrive next week as scattered WhatsApp notes. A photo shoot costs S$800 and takes a week. In Part A ChatGPT shoots and writes the T-shirt and you publish it. In Part B ChatGPT turns Rachel's notes into an import-ready CSV; you import it with the core range, build the Premium Polo's variations and link up-sells.

You will deliver

- The Classic Cotton T-Shirt with an AI photo and checked AI copy, priced and stocked
- An AI-generated new-season CSV, checked against the supplier notes
- Nine products imported by CSV into the category hierarchy
- The Premium Polo: 3 sizes × 2 colours = 6 priced variations
- Up-sells and cross-sells on the T-shirt

Who does what

- AI does — ChatGPT generates the product photo, drafts the descriptions and converts messy notes into a CSV with WooCommerce's exact column headers.
- You decide — You reject any photo or sentence that breaks the brand brief, and check every SKU, price and stock figure before it goes live — the importer will not.

Plugins and themes

- WooCommerce (from Lab 1) — Already active
- WooCommerce product CSV importer — Built in — Products > All Products > Import

Lab files

File	What it is
data/brand-brief.txt	Brand voice and photography rules
data/product-spec-TSHIRT-CLASSIC-001.txt	The facts AI must use — fabric, fit, care, price
templates/product-description-template.html	The long-description structure (hook · fabric & fit · size guide · care)
assets/images/TSHIRT-CLASSIC-001.jpg	Starter image — use it if image generation is slow
assets/images/CAP-COTTON-001.jpg	Starter image for the stretch challenge
assets/descriptions/TSHIRT-CLASSIC-001.txt	Reference copy — compare after you write yours
data/supplier-notes.txt	Rachel's WhatsApp notes for the four new-season products
data/harbour-co-products.csv	Core range — five products, ready to import
data/harbour-co-new-season-reference.csv	Reference answer — import this if your AI CSV fails
data/polo-variations.csv	The six polo variations: size, colour, SKU, price
assets/images/	Starter images for every catalogue product
assets/descriptions/	Reference copy for every catalogue product

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Step by step

Part A — Shoot and Write a Product with AI

1. Generate the product photo — ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt and data/product-spec-TSHIRT-CLASSIC-001.txt, then paste the prompt. Download the image you like.

PROMPT — paste into ChatGPT

```
ROLE: You are a fashion product photographer.
CONTEXT: Harbour & Co (brand brief attached) sells the Classic Cotton T-Shirt
(spec attached): a white, relaxed-fit 180 gsm combed-cotton tee.
TASK: Create ONE square (1:1) product photo for the online store.
CONSTRAINTS: Flat lay, viewed from directly above, on a warm sand (#EFE6D8)
linen background. Soft daylight from the left, gentle shadow, no harsh flash.
The tee is neatly folded at the sleeves. No people, no text, no logos, no props
except one small sprig of green leaves in a corner.
FORMAT: Generate the image.
```

✓ Expected: A square, on-brand flat-lay photo. If it takes too long, use assets/images/TSHIRT-CLASSIC-001.jpg.

2. Write the descriptions from the facts — Same ChatGPT chat

PROMPT — paste into ChatGPT

```
ROLE: You are Harbour & Co's copywriter.
CONTEXT: Use ONLY the facts in the attached product spec and the voice rules in
the brand brief.
TASK: Write (a) a product SHORT description of at most 30 words, and (b) a LONG
description that follows this structure: a 2-sentence hook; 'Fabric & fit';
'Size guide' as a small table S–XL with chest width in cm from the spec;
'Care'.
CONSTRAINTS: Use British spelling. Prices in S$ including 9% GST. Do not invent
facts, reviews, awards or sustainability claims. No claims about cooling, sweat
or sustainability.
FORMAT: Two headed sections: SHORT DESCRIPTION and LONG DESCRIPTION (Markdown).
```

✓ Expected: Copy that only uses spec facts. Compare with assets/descriptions/TSHIRT-CLASSIC-001.txt.

3. Fact-check before you paste — You

Read every sentence against the spec. Delete adjectives the brief bans and any fact you cannot find in the spec. This check is the content guideline a CMS policy enforces.

```
✓ fabric 180 gsm combed cotton   ✓ relaxed unisex fit   ✓ pre-shrunk   ✗
'cooling'   ✗ 'eco-friendly'
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

4. Create the product — Products > Add new product

Enter the title, paste the LONG description into the editor and the SHORT description into 'Product short description'.

```
Title: Classic Cotton T-Shirt
```

5. Price, SKU and stock — Product data > General / Inventory / Shipping

Leave the type as Simple product. Enter the prices, then the SKU; tick the stock-tracking box and set the quantity. Add weight.

```
Regular price 29.90 · Sale price 24.90
SKU TSHIRT-CLASSIC-001 · Track stock quantity ✓ · Quantity 50
Weight 0.2 kg · Dimensions 30 × 20 × 2 cm
```

6. Category and tags — Product categories / Product tags (right sidebar)

Add the category Apparel, then a child category Shirts under it, and tick Shirts. Add three tags.

```
Category: Apparel > Shirts   ·   Tags: cotton, unisex, casual
```

7. Product image and alt text — Product image > Set product image

Upload your AI photo. In the Media panel fill Alternative Text with a plain description a screen reader can read — this also feeds image search in Lab 5.

```
Alt text: White Harbour & Co classic cotton t-shirt laid flat on a sand
background
```

8. Publish and view it as a customer — Publish > View product

Publish, then open the product in a private window. Check photo, price, short description, tabs, category and tags.

✓ Expected: S$29.90 struck through, S$24.90 sale price, your photo and copy, Apparel > Shirts in the breadcrumb.

Part B — Let AI Build the New-Season Catalogue

9. Turn the supplier notes into a CSV — ChatGPT (chatgpt.com) — a new chat

Attach data/supplier-notes.txt and data/brand-brief.txt, then paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are an eCommerce catalogue manager who prepares WooCommerce imports.
CONTEXT: The attached supplier notes list four new Harbour & Co products. The
brand brief sets the voice.
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

```
TASK: Produce a CSV for the WooCommerce product importer, one row per product.
CONSTRAINTS: Use exactly these headers in this order:
Type,SKU,Name,Published,Short description,Regular price,Sale
price,Categories,Tags,In stock?,Stock,Weight (kg)
Type = simple. Published = 1. In stock? = 1. Categories use ' > ' for
hierarchy, e.g. Apparel > Bottoms. Weight in kg (250g = 0.25). Prices are
numbers with no S$ sign. Leave Sale price empty when there is no promo. Short
description ≤ 25 words in the brand voice, built only from the notes. Wrap any
field containing a comma in double quotes. Tag every linen or resort item with
'resort'.
FORMAT: One CSV code block only, then a table listing each SKU with its price
and stock so I can check them.
```

✓ Expected: Four rows. Save the code block as harbour-co-new-season.csv (UTF-8).

10. Check the CSV against the notes — You (a spreadsheet or text editor)

Compare each SKU, price, sale price, stock and category with the notes. Fix mistakes in the file, not in ChatGPT.

```
RESORT-SHIRT-001 59.90 · 30
TROUSER-LINEN-001 69.90 · 30 · Apparel > Bottoms
SKIRT-MIDI-001 54.90 / sale 46.90 · 25
BAG-RATTAN-001 45.90 · 20 · Accessories
```

11. Import the core range — Products > All Products > Import

Choose data/harbour-co-products.csv, click Continue, review the column mapping, then Run the importer.

✓ Expected: 'Import complete! 5 products imported.'

12. Import your AI-generated CSV — Products > All Products > Import

Repeat with harbour-co-new-season.csv. If the importer rejects it, import data/harbour-co-new-season-reference.csv instead and compare the two files to see why.

✓ Expected: 4 products imported; Apparel > Bottoms is created automatically.

13. Create the variable polo — Products > Add new product

Title Premium Polo Shirt. In Product data change Simple product to Variable product.

```
Title: Premium Polo Shirt   ·   Product data: Variable product   ·   Category:
Apparel > Shirts
```

14. Add Size and Colour attributes — Product data > Attributes

Add a custom attribute Size, then Colour. Tick 'Used for variations' on both and Save attributes.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

```
Size:  S | M | L
Colour:  Black | White
```

15. Generate and price the six variations — Product data > Variations

Click Generate variations. Expand each one and enter its SKU, price and stock (see data/polo-variations.csv). Set the default form values to M / Black. Publish.

```
POLO-S-BLK 39.90 · POLO-M-BLK 39.90 · POLO-L-BLK 41.90
POLO-S-WHT 39.90 · POLO-M-WHT 39.90 · POLO-L-WHT 41.90   ·   Stock 25 each
```

✓ Expected: The product page shows S$39.90 – S$41.90 and Size / Colour dropdowns.

16. Link up-sells and cross-sells — Classic Cotton T-Shirt > Product data > Linked Products

Up-sell the more premium polo on the product page; cross-sell the cap and tote in the cart. Update.

```
Upsells: Premium Polo Shirt   ·   Cross-sells: Cotton Cap, Canvas Tote Bag
```

17. Ask AI for a catalogue audit — Same ChatGPT chat

Export the catalogue (Products > All Products > Export > Generate CSV), attach the file and paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are a catalogue QA analyst.
CONTEXT: The attached file is Harbour & Co's full product export.
TASK: Find maintenance problems: missing images, missing short descriptions,
duplicate or malformed SKUs, products with no category or still in
'Uncategorized', sale prices higher than regular prices, stock of 0.
FORMAT: A table: SKU · problem · fix. Then the three fixes that matter most for
customers.
```

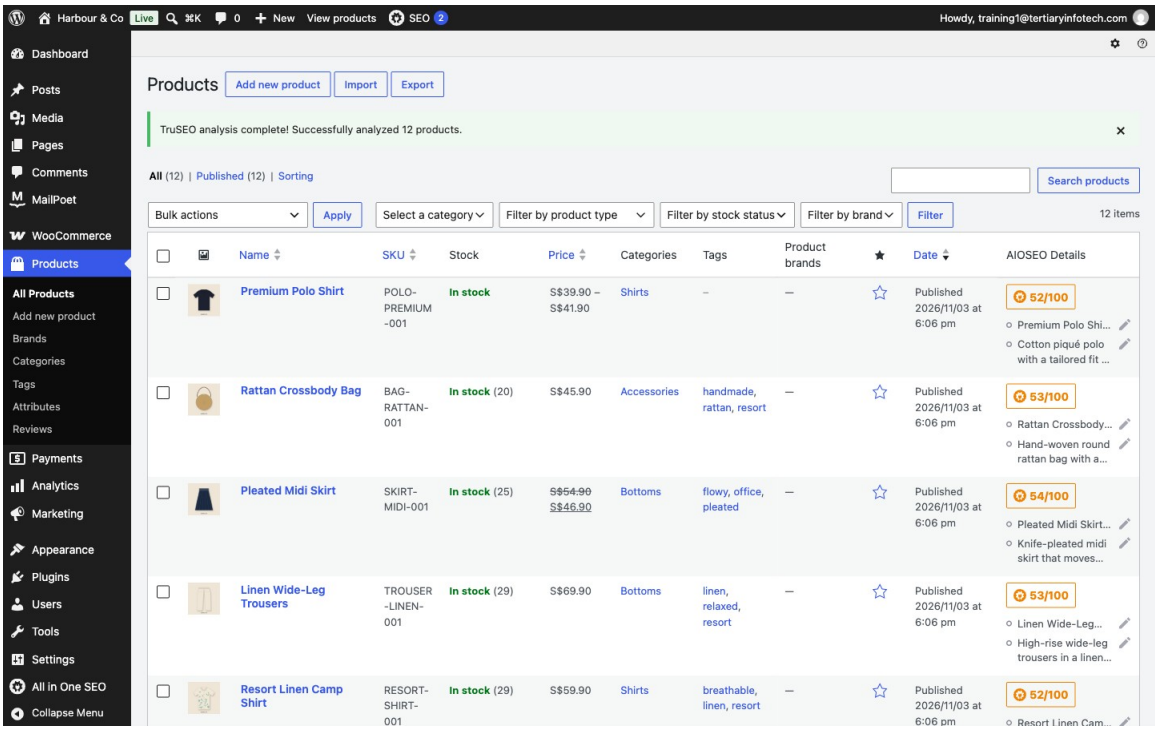

✓ Expected: A short fix list — most rows will say 'no image' until you add the starter images.

Prompt Playbook — step → prompt → step → prompt

- Step 1 · AI PROMPT · Generate the product photo
- Step 2 · AI PROMPT · Write the descriptions from the facts
- Step 3 · YOU · Fact-check before you paste
- Step 4 · YOU · Create the product
- Step 5 · YOU · Price, SKU and stock
- Step 6 · YOU · Category and tags
- Step 7 · YOU · Product image and alt text
- Step 8 · YOU · Publish and view it as a customer

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Step 9 · AI PROMPT · Turn the supplier notes into a CSV
- Step 10 · YOU · Check the CSV against the notes
- Step 11 · YOU · Import the core range
- Step 12 · YOU · Import your AI-generated CSV
- Step 13 · YOU · Create the variable polo
- Step 14 · YOU · Add Size and Colour attributes
- Step 15 · YOU · Generate and price the six variations
- Step 16 · YOU · Link up-sells and cross-sells
- Step 17 · AI PROMPT · Ask AI for a catalogue audit

Products > All Products after Lab 2: the AI-photographed T-shirt, imported products, the polo's price range, the category hierarchy.

Checkpoint

All Products lists 11 products with your AI-photographed Classic Cotton T-Shirt among them, the polo shows S$39.90 – S$41.90, and Apparel has Shirts, Bottoms and Outerwear under it.

- □ The product photo is AI-generated (or the starter image) and follows the brand photo rules
- □ Short description ≤ 30 words; long description uses only spec facts
- □ Regular S$29.90, sale S$24.90, SKU TSHIRT-CLASSIC-001, stock 50
- □ Category Apparel > Shirts and tags cotton, unisex, casual
- □ Alt text filled on the product image
- □ Nine CSV-imported products plus the T-shirt and polo appear in All Products

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- □ Categories: Apparel > Shirts, Apparel > Bottoms, Apparel > Outerwear and Accessories
- □ The polo has six variations, each with SKU, price and stock
- □ The T-shirt up-sells the polo and cross-sells the cap and tote

Troubleshooting

Symptom	Fix
ChatGPT refuses or is slow to make images	Use the starter image in assets/images/ and continue — the copy step does not depend on it.
The image has text or a logo on it	Reply: 'Regenerate with no text, no logos, nothing printed on the shirt.'
The sale price does not show	Check the sale price is lower than the regular price and that no sale schedule dates are set in the future.
Importer: 'Invalid file type'	Save as .csv (UTF-8). In Excel use 'CSV UTF-8 (Comma delimited)'.
Columns land in the wrong fields	On the mapping screen choose the right WooCommerce field for each column, or fix the header spelling.
'Import complete' but 0 products imported	You ticked 'Update existing products'. That option only updates SKUs already in the store and skips new ones — untick it for a first import.
A variation is missing from the dropdown	Every variation needs its own price. Expand it and enter the Regular price.
Cotton Cap is not in the cross-sell search	Create it first (the stretch challenge) or pick another accessory.

Stretch challenge

Repeat for the Cotton Cap (CAP-COTTON-001, S$19.90, Accessories) and ask ChatGPT for three photo variations — pick the one that best matches the brief.

Topic 03 — Manage Payments and Shipping with AI (Lab 3 · LO4)

Give customers the checkout they expect, and the policies that back it up.

3.1 Payment Methods

With AI: Recommend the methods your customers expect.

- Online gateways — Stripe, PayPal and WooPayments take cards and wallets; check fees, currencies and payouts.
- Choosing a gateway — Location, fees, supported currencies and whether the customer stays on your site.
- Offline methods — Payments > Take offline payments: bank transfer (PayNow), cheque, cash on delivery. The order waits On hold until paid.

3.2 Shipping Options

With AI: Flat rate, free above S$100, studio pickup.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Shipping zones — A zone is a region with its own methods; Singapore is Harbour & Co's only zone.
- Flat rate — Costs are entered excluding tax: 4.59, taxable, charges S$5.00.
- Free shipping — Unlocked by a minimum order amount or a coupon.
- Local pickup — Collect from the studio at no charge.

3.3 Store Policies Drafted with AI

Added to this course: Privacy, returns, shipping and payment pages in minutes.

- Four pages customers read — Privacy (PDPA 2012), Returns & Refunds, Shipping & Delivery, Payment Methods.
- Facts in, policy out — Give the AI the policy fact sheet; every number must match the checkout.
- Not legal advice — The owner reviews and signs off every policy before it is published.

Key Concepts for Lab 3

- Variable products carry attributes used for variations; every variation needs its own price.
- Categories are hierarchical (Apparel > Shirts); tags are flat; up-sells show on the product page, cross-sells in the cart.
- The CSV importer needs exact headers; for a first import leave 'Update existing products' unticked — it skips new SKUs.
- AI can turn messy notes into a CSV, but you check every SKU, price and stock figure before importing.

Lab 3 — AI Drafts the Policies, You Switch On Payments and Shipping

Phase 1 · 25 minutes · LO4 · folder labs/lab-03-ai-policies-payments-shipping/

ChatGPT drafts the privacy, returns, shipping and payment pages. You make the checkout keep every promise.

Objective: Recommend and configure payment and shipping methods that improve customer experience.

The business scenario

Customers will not pay a store that hides its rules. Harbour & Co needs four pages before launch — Privacy Policy (Singapore PDPA), Returns & Refunds, Shipping & Delivery and Payment Methods — and a checkout that matches them: PayNow or bank transfer, pay at pickup, S$5 delivery, free above S$100, free studio pickup.

You will deliver

- Four AI-drafted policy pages, checked against the brand promises and published
- Privacy and Terms pages linked in Settings so checkout shows them

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Payments: Direct bank transfer (PayNow) and Pay at pickup enabled
- Shipping zone Singapore: flat rate S$5, free shipping from S$100, local pickup
- A 'Customer care' footer menu linking the four policies

Who does what

- AI does — ChatGPT drafts every policy page from the brand promises in the brief.
- You decide — You check every promise matches the settings you configure — and you flag the drafts for the owner's legal review.

Plugins and themes

- WooCommerce (from Lab 1) — Offline payment methods are built in

Lab files

File	What it is
data/brand-brief.txt	Brand promises: delivery, returns, payment
data/policy-facts.txt	The facts every policy must state: fees, days, contact, PDPA officer
templates/privacy-policy.html	Reference draft — Privacy Policy (PDPA)
templates/returns-and-refunds.html	Reference draft — Returns & Refunds
templates/shipping-and-delivery.html	Reference draft — Shipping & Delivery
templates/payment-methods.html	Reference draft — Payment Methods
templates/terms-and-conditions.html	Reference draft — Terms and Conditions

Step by step

1. Draft the four policy pages — ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt and data/policy-facts.txt, then paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are an eCommerce operations writer for small Singapore retailers.
CONTEXT: Harbour & Co (brief attached). The attached policy facts are the ONLY
source of fees, days and contacts.
TASK: Draft four customer-facing pages: 1) Privacy Policy aligned to
Singapore's Personal Data Protection Act 2012 (PDPA) — what we collect at
checkout, why, who we share it with (payment and delivery partners), retention,
the customer's access and correction rights, our Data Protection Officer
contact; 2) Returns & Refunds; 3) Shipping & Delivery; 4) Payment Methods.
CONSTRAINTS: Plain English, short headed sections, under 350 words per page.
Use only the facts given — if a fact is missing write [TO CONFIRM]. Use British
spelling. Prices in S$ including 9% GST. Do not invent facts, reviews, awards
or sustainability claims.
FORMAT: Four Markdown sections, each starting with the page title as a #
heading.
```

✓ Expected: Four pages. Any [TO CONFIRM] marks a fact Rachel must supply.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

2. Check every promise — You

Tick each number against policy-facts.txt. The page and the checkout must say the same thing.

```
Delivery S$5 islandwide · free from S$100 · 2–4 working days
Returns 14 days · unworn with tags · refund in 5–7 working days
Pickup free at 71 Ayer Rajah Crescent, Tue–Sun 11am–7pm
```

3. Publish the four pages — Pages > Add Page

Create Privacy Policy, Returns & Refunds, Shipping & Delivery and Payment Methods. Paste the Markdown — the block editor turns # headings and lists into blocks. Publish each.

```
WordPress already has a draft 'Privacy Policy' page — open it from Pages and
replace its content.
```

4. Link privacy and terms to checkout — Settings > Privacy · WooCommerce > Settings > Advanced

In Settings > Privacy select your Privacy Policy page. In WooCommerce > Settings > Advanced > Page setup set Terms and conditions to Returns & Refunds (or a Terms page from the challenge). Save.

✓ Expected: Checkout now shows the privacy notice and a terms checkbox.

5. Switch on PayNow / bank transfer — WooCommerce > Settings > Payments > Take offline payments

Enable Direct bank transfer, then Manage it and rename it so customers recognise it. Add the account details.

```
Title: PayNow or bank transfer
Instructions: PayNow to UEN 201900000H (Harbour & Co Pte Ltd). Use your order
number as the reference.
Account: Harbour & Co Pte Ltd · DBS · 000-000000-0 (training data)
```

6. Switch on pay at pickup — WooCommerce > Settings > Payments > Take offline payments

Enable Cash on delivery, rename it, and limit it to local pickup so nobody expects a courier to collect cash.

```
Title: Pay at pickup (cash or card)   ·   Enable for shipping methods: Local
pickup
```

7. Build the Singapore shipping zone — WooCommerce > Settings > Shipping > Add zone

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Name the zone, choose the region, then add three shipping methods and set each one.

```
Zone name: Singapore · Zone regions: Singapore
1) Flat rate — Tax status: Taxable · Cost 4.59  (shipping costs are entered
EXCLUDING GST: 4.59 + 9% = S$5.00)
2) Free shipping — Free shipping requires: A minimum order amount · 100.00
3) Local pickup — Name: Studio pickup (71 Ayer Rajah Crescent) · Cost: blank
(free)
```

8. Add the Customer care footer menu — Appearance > Menus

Create a menu called Customer care with the four policy pages. Then Appearance > Widgets > Footer Column 2 > + > Navigation Menu > Customer care. Update.

```
Menu: Customer care → Shipping & Delivery · Returns & Refunds · Payment Methods
· Privacy Policy
```

9. Test the checkout as a customer — Private browser window

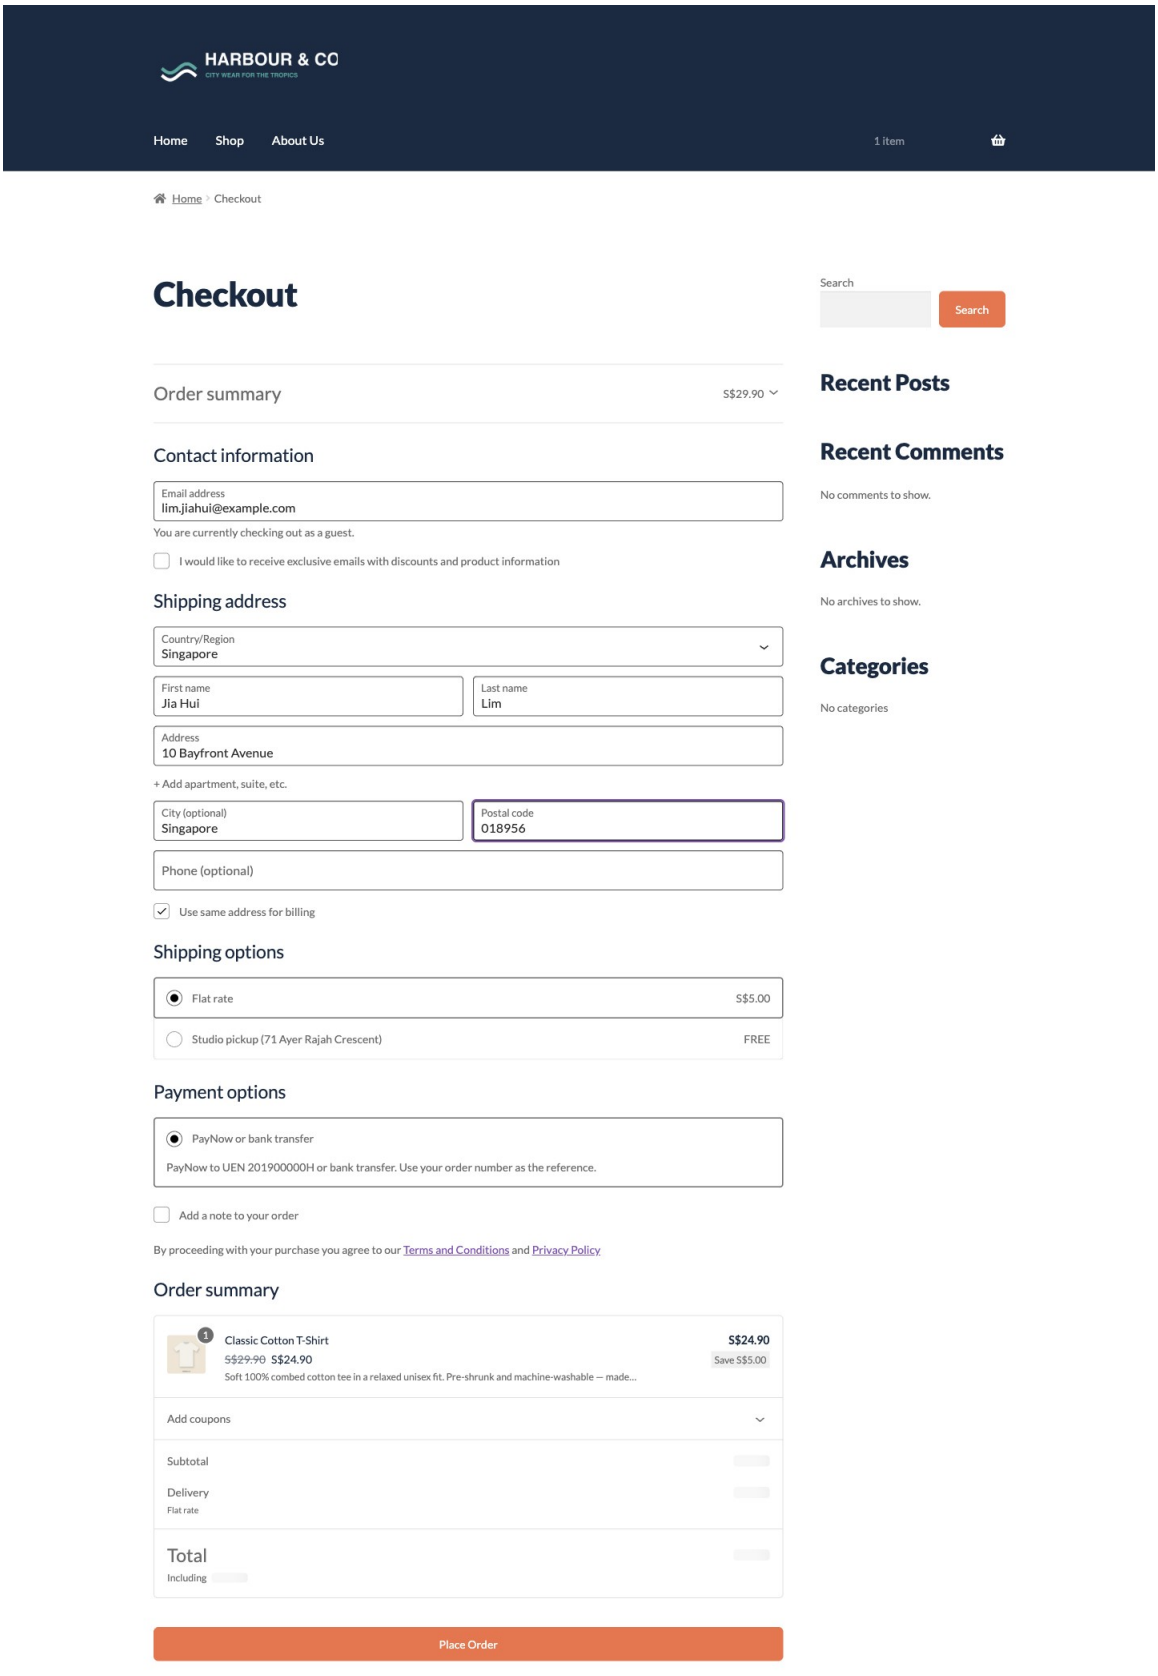

Add the T-shirt to the cart, go to Checkout, enter a Singapore address (fill City: Singapore — checkout rejects a blank city) and look — do not place the order yet.

✓ Expected: Flat rate S$5.00, Local pickup, and (once the cart passes S$100) Free shipping; PayNow or bank transfer; Pay at pickup; policy links.

Prompt Playbook — step → prompt → step → prompt

- Step 1 · AI PROMPT · Draft the four policy pages
- Step 2 · YOU · Check every promise
- Step 3 · YOU · Publish the four pages
- Step 4 · YOU · Link privacy and terms to checkout
- Step 5 · YOU · Switch on PayNow / bank transfer
- Step 6 · YOU · Switch on pay at pickup
- Step 7 · YOU · Build the Singapore shipping zone
- Step 8 · YOU · Add the Customer care footer menu
- Step 9 · YOU · Test the checkout as a customer

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Checkout after Lab 3: delivery options, PayNow / bank transfer and the privacy / terms notice.

Checkpoint

Checkout shows three delivery options, two payment methods, and links to the Privacy Policy and Terms.

- □ Four policy pages are published and in the Customer care footer menu
- □ Privacy page is set in Settings > Privacy; a Terms page is set in WooCommerce > Advanced
- □ Two payment methods are enabled with customer-friendly titles
- □ The Singapore zone has flat rate S$5, free shipping from S$100 and local pickup
- □ The checkout options match what the policy pages promise

Troubleshooting

Symptom	Fix
No shipping options at checkout	The address must be in Singapore (inside the zone) and each method must be enabled in the zone.
Free shipping never appears	The cart total must reach S$100 after any coupon; check 'Requires: A minimum order amount'.
Pay at pickup shows for delivery orders	Set 'Enable for shipping methods' to Local pickup only.
Flat rate shows S$5.45, not S$5.00	Shipping costs are entered excluding tax. Enter 4.59 with Tax status Taxable, or 5.00 with Tax status None.

Stretch challenge

Ask ChatGPT for Terms and Conditions using the same facts, publish it, and point WooCommerce > Advanced > Terms and conditions at it.

Activity — Discussion — Recommend Payment and Shipping for Customer Experience (15 minutes)

Working from the store you have built, recommend the payment and shipping mix that would give your customers the best experience — and justify the trade-offs.

Discussion prompts

- Which payment methods do your customers expect, and what does each one cost you?
- Does the customer stay on your site, or get redirected? Why does that matter for conversion?
- Would free shipping above a threshold raise your average order value or erode your margin?
- Which shipping zones do you actually serve, and what happens to orders outside them?

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

What to produce

A recommended payment and shipping configuration with the customer-experience reason for each choice.

Note: Write your answer down — you will apply the same reasoning to your own store in the labs.

Topic 04 — Manage Sales with AI (Lab 4 · LO5)

Take the order, fix the problem, keep the customer.

4.1 Manage Orders and Issues

With AI: Read an order and fix it before it ships.

- Order statuses — Pending payment, On hold, Processing, Completed, Cancelled, Refunded, Failed.
- Editing an order — Change status, line items, fees, coupons and addresses; add notes.
- Manual orders — Phone and studio sales entered by hand, then emailed for payment.
- Stock issues — Stock management, low-stock thresholds and out-of-stock handling stop overselling.

4.2 Manage Refund

With AI: Refund the tote and put it back in stock.

- Manual or gateway refunds — Refund through the gateway, or manually for bank transfers.
- Restock — Tick 'Restock refunded items' so the stock figure stays right.

4.3 Manage Coupon and Promotion

With AI: WELCOME10 and RESORT15, built and checked.

- Three discount types — Percentage, fixed cart and fixed product discounts.
- Limits — Minimum spend, usage limits, product restrictions and expiry dates.

4.4 Customer Replies Drafted with AI

Added to this course: The apology email, with the right refund figure.

- Facts first — Give the AI the order, the complaint and the decision you have already made.
- Check the maths — Tote S$24.90 less its share of WELCOME10 = S$22.41, the figure WooCommerce shows.
- Send from the order — Order notes > Note to customer emails the reply and keeps it on the record.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Key Concepts for Lab 4

- Customers read four pages before paying: Privacy (PDPA), Returns & Refunds, Shipping & Delivery, Payment Methods.
- Offline payments (PayNow / bank transfer, pay at pickup) hold the order until payment is confirmed.
- A shipping zone holds methods: flat rate, free shipping above a minimum, local pickup.
- Shipping costs are entered excluding tax — enter 4.59 (taxable) to charge S$5.00.

Lab 4 — Run a Day of Orders — Refund, Restock, Reply with AI

Phase 1 · 25 minutes · LO5 · folder labs/lab-04-orders-refunds-ai-replies/

Take an order with WELCOME10, refund a damaged item with restocking, and send a reply ChatGPT drafted.

Objective: Highlight and resolve issues related to sales, stock, refunds and promotions.

The business scenario

Launch morning. Tan Wei Ling orders a polo and a tote using the welcome coupon, then emails: the tote's strap stitching came loose. Daniel is off sick, so you run the shop: process the order, refund the tote and put it back in stock, and send her a reply that sounds like Harbour & Co — drafted by AI, approved by you.

You will deliver

- WELCOME10 coupon: 10% off, minimum spend S$50, one use per customer
- A test order placed at checkout with WELCOME10 and moved from Processing to Completed
- The tote refunded with 'Restock refunded items' ticked
- An AI-drafted, human-approved note to the customer on the order
- A manual phone order created for a walk-in customer

Who does what

- AI does — ChatGPT drafts the customer reply and an out-of-stock message.
- You decide — You decide the refund, check the amount, edit the reply and press send.

Plugins and themes

- WooCommerce (from Lab 1) — Orders, coupons and refunds are built in

Lab files

File	What it is
data/brand-brief.txt	Voice for customer replies
data/customer-tan-wei-ling.txt	The mock customer, her order and her complaint

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	email
data/order-issues.csv	Five realistic order issues to triage
templates/customer-replies.txt	Reference replies: refund, out of stock, delayed delivery

Step by step

1. Create the WELCOME10 coupon — Marketing > Coupons > Add coupon

Enter the code and set the rules on each tab. Publish.

```
Code: WELCOME10 · Discount type: Percentage discount · Amount: 10
Usage restriction: Minimum spend 50
Usage limits: Usage limit per user 1
```

2. Place the test order — Private browser window (as the customer)

Add a Premium Polo (M / Black) and a Canvas Tote Bag. At checkout apply WELCOME10, use Tan Wei Ling's details and pay with PayNow or bank transfer.

```
Tan Wei Ling · tan.weiling@example.com · 8 Marina Boulevard, #12-04 · City:
Singapore · Postcode 018981
```

✓ Expected: Subtotal S$64.80 · WELCOME10 −S$6.49 · Flat rate S$5.00 · Total S$63.32 (includes GST) · order status On hold.

3. Move the order through its statuses — WooCommerce > Orders > the order

Bank transfer orders arrive On hold. Mark it Processing when the PayNow money lands, then Completed once shipped. Update each time.

```
On hold → Processing (payment received) → Completed (shipped)
```

4. Draft the reply with AI — ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt and data/customer-tan-wei-ling.txt, then paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are Harbour & Co's customer-care lead.
CONTEXT: Tan Wei Ling's email and order are attached. We will refund the Canvas
Tote Bag in full to her original payment method within 5–7 working days and she
does not need to post it back.
TASK: Draft a reply to her.
CONSTRAINTS: Under 120 words. Apologise once, state the refund amount (S$24.90
less her share of the 10% coupon = S$22.41) and timing, thank her for the
photo, no discount bribes, sign off as Harbour & Co Customer Care. Use British
spelling. Prices in S$ including 9% GST. Do not invent facts, reviews, awards
or sustainability claims.
FORMAT: Plain text, ready to paste.
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

✓ Expected: A short, warm reply with the exact refund figure. Edit anything that over-promises.

5. Refund the tote and restock it — WooCommerce > Orders > the order > Refund

Enter quantity 1 against the Canvas Tote Bag, tick 'Restock refunded items', give the reason, and click Refund manually.

```
Refund quantity: 1 × Canvas Tote Bag · Restock refunded items ✓ · Reason: strap stitching loose
```

✓ Expected: A red refund line, and an order note 'Item #… stock increased from 59 to 60'.

6. Send your approved reply — Order notes (right sidebar)

Paste your edited reply, choose Note to customer, and click Add. WooCommerce emails it and keeps it on the order record.

```
Add note → Note to customer → Add
```

7. Enter a phone order by hand — WooCommerce > Orders > Add order

A walk-in customer phoned: one Linen Summer Shirt for local pickup. Add the customer, the product and the Local pickup shipping line, then Create.

✓ Expected: A new Pending payment order you can email to the customer for payment.

8. Triage the rest of the inbox with AI — Same ChatGPT chat

Attach data/order-issues.csv and paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are a WooCommerce store manager.
CONTEXT: The attached CSV lists five customer issues.
TASK: For each, give the order status to set, the WooCommerce action (refund, restock, edit order, coupon, note) and a one-line customer reply.
FORMAT: A table: issue · status · action · reply.
```

✓ Expected: A triage table you can act on — check each action is possible in WooCommerce.

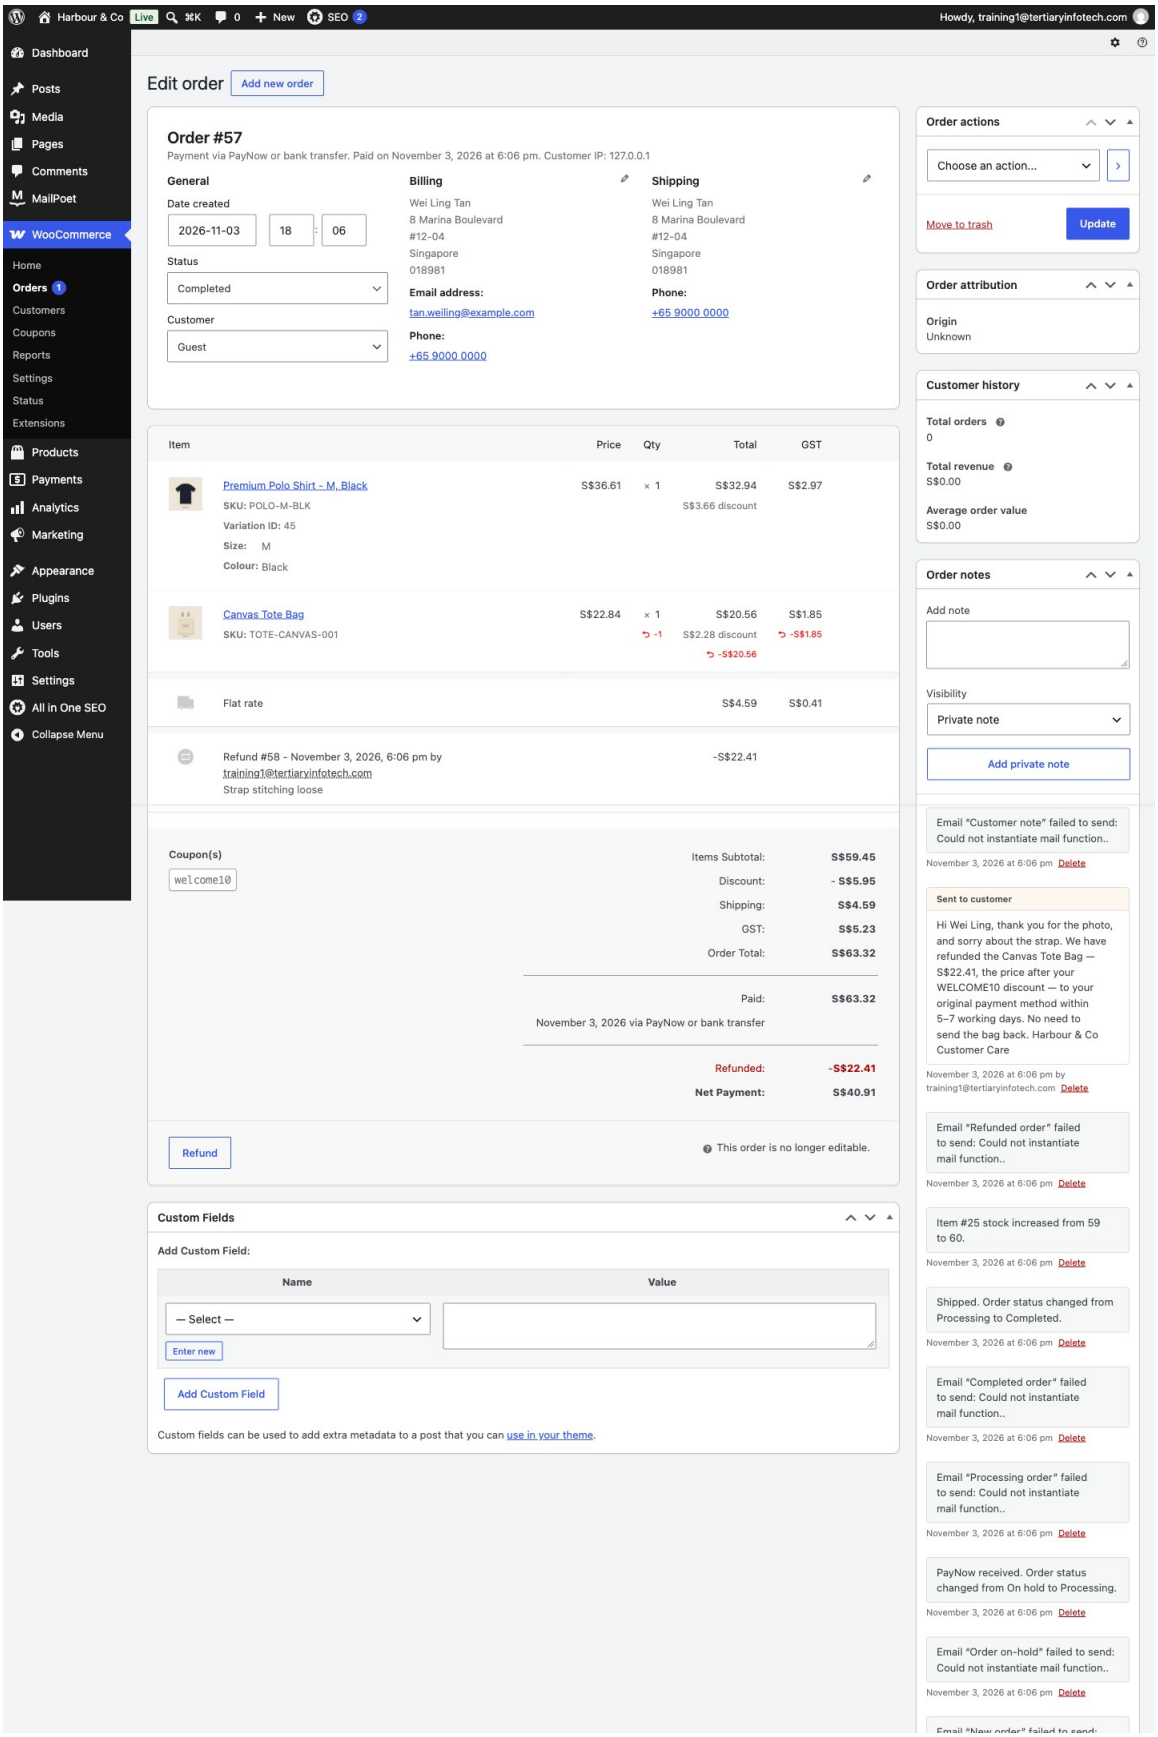

Prompt Playbook — step → prompt → step → prompt

- Step 1 · YOU · Create the WELCOME10 coupon
- Step 2 · YOU · Place the test order
- Step 3 · YOU · Move the order through its statuses
- Step 4 · AI PROMPT · Draft the reply with AI
- Step 5 · YOU · Refund the tote and restock it

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Step 6 · YOU · Send your approved reply
- Step 7 · YOU · Enter a phone order by hand
- Step 8 · AI PROMPT · Triage the rest of the inbox with AI

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

The order screen after Lab 4: coupon, restocked refund and the note to the customer.

Checkpoint

The order shows WELCOME10, a refund for the tote, a stock-increase order note, and your note to the customer.

- □ WELCOME10 exists with minimum spend S$50 and one use per customer
- □ The test order used WELCOME10 and reached Completed
- □ The tote is refunded and its stock went back up
- □ The order carries your note to the customer
- □ A manual order exists for the phone customer

Troubleshooting

Symptom	Fix
'The minimum spend for this coupon is S$50.00'	The cart must reach S$50 before the discount — add the tote.
Refund button is missing	Refunds are available once the order is Processing or Completed.
Stock did not go back up	'Restock refunded items' was not ticked — adjust stock in the product's Inventory tab.

Stretch challenge

Ask ChatGPT for a polite 'back in stock soon' message, then set the Classic Denim Jacket stock to 0 and check how the product page reports it.

Topic 05 — Manage Store Performance with AI (Lab 5 · LO6)

Read the reports, get found in AI search, and run a campaign that tracks itself.

5.1 Sales Reports

With AI: Pick the three numbers the owner sees every week.

- Reports and Analytics — Orders, revenue, products, categories, coupons, customers and stock.
- eCommerce metrics — Conversion rate, average order value, revenue by channel, repeat purchase and refund rate.
- Criteria for a metric — Actionable, comparable over time, attributable to a cause, and tied to a decision.

5.2 Dashboard Widgets

With AI: Store status at a glance.

- WooCommerce Status widget — Sales this month, top seller, orders awaiting processing, low and out-of-stock items.
- Screen Options — Choose which widgets each admin user sees on the dashboard.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

5.3 Google Analytics Integration

With AI: See which channel brought the buyer.

- Google Analytics for WooCommerce — Sends product views, add-to-cart and purchase events to GA4.
- Order attribution — WooCommerce records each order's source, medium and campaign from its UTM tags.
- Extending the store — Subscriptions, Bookings and Memberships add their own reports.

Activity — Discussion — Metrics to Measure Store Performance (15 minutes)

Decide which metrics you would use to judge whether the store is succeeding, and what criteria make a metric worth tracking at all.

Discussion prompts

- Which three metrics would you put in front of the business owner every week?
- What makes a metric useful — is it actionable, comparable, and tied to a decision?
- What does a rising refund rate or a falling repeat-customer rate actually tell you?
- Which report or tool produces each metric — WooCommerce Analytics or Google Analytics?

What to produce

A shortlist of performance metrics with the criteria used to select them and their data source.

Note: Write your answer down — you will apply the same reasoning to your own store in the labs.

5.4 Search Performance: SEO in the Age of AI Search

Added to this course: AI writes the meta titles, descriptions and alt text.

- How search works — Crawl, index, rank and serve, and what a modern results page holds.
- SEO, AEO and GEO — Rank in results, win the featured answer, and get cited in AI Overviews.
- E-E-A-T — Experience, Expertise, Authoritativeness and Trustworthiness.
- On-page SEO — Meta title ≈ 60 characters (AIOSEO: 600 pixels), meta description ≈ 155, clean URLs, a sitemap and alt text.

5.5 Campaign Performance: AI Marketing That Measures Itself

Added to this course: Social posts and a newsletter with a coupon and UTM tags.

- One campaign, three channels — Instagram, Facebook and a MailPoet newsletter, each in its own format.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- UTM tags plus a coupon — utm_source, utm_medium and utm_campaign, plus RESORT15, attribute each sale to a channel.
- Read the result — Analytics > Coupons and the order's attribution show which channel sold.

Key Concepts for Lab 5

- Order statuses: Pending payment → On hold (bank transfer) → Processing → Completed; Refunded, Cancelled, Failed.
- Refunds can restock items so inventory stays accurate.
- Coupons: percentage, fixed cart or fixed product, with minimum spend, usage limits and expiry.
- A Note to customer on the order emails the reply and keeps it on the record.

Lab 5 — Get Found, Then Launch the Resort Linen Drop — SEO, Social, Results

Phase 2 · 25 minutes · LO6 · folder labs/lab-05-ai-seo-and-campaign/

ChatGPT writes the SEO and the campaign; RESORT15 and UTM tags prove which channel sold.

Objective: Maintain content that search engines and AI answers can find, then develop and review the metrics that show whether the store and its campaign perform.

The business scenario

The store works, but nobody can find it — and the Resort Linen Drop goes live today. In Part A ChatGPT researches buyer keywords and writes the meta titles, descriptions and alt text you apply in All in One SEO. In Part B you create RESORT15, ChatGPT writes the posts, the post image and the newsletter, you tag every link, place a test order through the Instagram link and read the results.

You will deliver

- A keyword map: one primary keyword per page, from AI research checked by you
- Meta titles (≤ 60) and descriptions (≤ 155) on the home page and three products; alt text on every image
- RESORT15: 15% off the four Resort Linen pieces, 14 days, one use per customer
- AI-drafted Instagram and Facebook posts and a MailPoet newsletter, every link UTM-tagged
- A test order through the Instagram link and a one-page results review

Who does what

- AI does — ChatGPT researches keywords, writes meta text to the character limits, drafts the posts, image and newsletter, and analyses the week-1 results.
- You decide — You choose the keyword for each page, approve every word before it is public, and decide what to change from the numbers.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Plugins and themes

- All in One SEO (AIOSEO) — Plugins > Add Plugin > search 'All in One SEO' > Install Now > Activate
- MailPoet — Plugins > Add Plugin > search 'MailPoet' > Install Now > Activate
- WooCommerce Analytics — Built in — Analytics > Coupons / Orders

Lab files

File	What it is
data/brand-brief.txt	Brand brief
data/keyword-seeds.txt	Market, pages to rank, seed terms
data/keyword-map-template.csv	Fill in: page · primary keyword · title · description
data/seo-meta-reference.csv	Reference answer for all 12 products
data/product-catalogue.csv	Every product with its short description — context for the prompts
data/campaign-brief.txt	Offer, channels, hashtag, UTM links and KPIs
data/campaign-week1.csv	Mock week-1 results for the AI review
templates/social-post-mockup.html	Open in a browser: load your image, paste your caption, screenshot the post
templates/newsletter-resort-linen.html	Reference newsletter
templates/social-posts-reference.txt	Reference captions
assets/images/social-resort-linen-1080.jpg	Starter post image (1080 × 1080)
assets/images/newsletter-header.jpg	Newsletter header image

Step by step

Part A — Get Found — AI Writes the SEO, You Approve It

1. Install All in One SEO — Plugins > Add Plugin

Search for All in One SEO, Install Now, Activate. When its setup wizard opens, click 'Go back to the Dashboard' — the defaults are fine.

✓ Expected: An All in One SEO menu appears, and an 'AIOSEO Settings' panel appears under each product.

2. Research buyer keywords — ChatGPT (chatgpt.com) — a new chat

Attach data/keyword-seeds.txt and data/brand-brief.txt, then paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are an SEO strategist for Singapore fashion retailers.
CONTEXT: Keyword seeds and the brand brief are attached. Pages to rank: Home,
Resort Linen Camp Shirt, Linen Wide-Leg Trousers, Classic Cotton T-Shirt.
TASK: Suggest 12 buyer-intent keywords and assign ONE primary keyword to each
page so no two pages compete.
CONSTRAINTS: Singapore searchers, English. Prefer specific, high-relevance,
lower-competition phrases. Mark each as transactional or commercial. Do not
include competitor brand names. You cannot see live search volumes — say so and
rate volume as an estimate only.
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

```
FORMAT: Table 1: keyword · intent · estimated volume (low/med/high) · why.
Table 2: page · primary keyword.
```

✓ Expected: A keyword table and a page map. Copy the map into data/keyword-map-template.csv.

3. Write the meta titles and descriptions — Same ChatGPT chat

PROMPT — paste into ChatGPT

```
TASK: For each page in your map, write a meta title and a meta description.
CONSTRAINTS: Title ≤ 60 characters, primary keyword first, then '| Harbour &
Co'. Description ≤ 155 characters, includes the keyword naturally, states one
concrete fact (fabric, price or delivery) and ends with a reason to click.
Count the characters and show the count. Use British spelling. Prices in S$
including 9% GST. Do not invent facts, reviews, awards or sustainability
claims.
FORMAT: Table: page · meta title · chars · meta description · chars.
```

✓ Expected: Every title ≤ 60 and description ≤ 155 — check the counts yourself.

4. Apply them to the products — Products > edit product > AIOSEO Settings (below the editor)

Open the Resort Linen Camp Shirt. On the Appearance tab, under Search Appearance, replace the Product Title and Meta Description with yours. On the Optimization tab enter the Focus Keyphrase. Update. Repeat for the trousers and the T-shirt. (AIOSEO also has an AI Copilot tab — compare its suggestion with ChatGPT's.)

```
Appearance > Product Title: Resort Linen Camp Shirt, Palm Print | Harbour & Co
Appearance > Meta Description: Relaxed camp-collar shirt in 150 gsm European
linen …
Optimization > Focus Keyphrase: linen camp shirt singapore
```

✓ Expected: The SERP Preview shows your title and description; counters read under 600 pixels and under 160 characters.

5. Set the home page meta — All in One SEO > Search Appearance > Global Settings

Set the Home Page Title and Meta Description from your table. Save Changes.

6. Write alt text for every image — Same ChatGPT chat, then Media > Library

In Media > Library open each image and paste its Alternative Text.

PROMPT — paste into ChatGPT

```
TASK: Write alt text for each Harbour & Co product image: what the image shows,
colour, product name.
CONSTRAINTS: ≤ 125 characters, no 'image of', no keyword stuffing.
FORMAT: Table: SKU · alt text.
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

✓ Expected: Every product image has alt text.

7. Check the sitemap — All in One SEO > Sitemaps

Confirm 'Enable Sitemap' is on, then click Open Sitemap. Products, pages and product categories should be listed.

```
https://YOUR-SITE/sitemap.xml
```

Part B — Launch the Resort Linen Drop — Social, Newsletter, Results

8. Create the RESORT15 coupon — Marketing > Coupons > Add coupon

Limit it to the four Resort Linen products and give it a 14-day expiry.

```
Code: RESORT15 · Percentage discount · 15 · Coupon expiry date: today + 14 days
Usage restriction > Products: Resort Linen Camp Shirt, Linen Wide-Leg Trousers,
Rattan Crossbody Bag, Linen Summer Shirt
Usage limits: Usage limit per user 1
```

9. Write the social posts — ChatGPT (chatgpt.com) — a new chat

Attach data/brand-brief.txt and data/campaign-brief.txt, then paste the prompt.

PROMPT — paste into ChatGPT

```
ROLE: You are Harbour & Co's social media lead.
CONTEXT: Brand brief and campaign brief attached.
TASK: Write (1) an Instagram feed caption, (2) a 3-frame Instagram story
script, and (3) a Facebook page post for the Resort Linen Drop.
CONSTRAINTS: Lead with the product, not the discount. Mention RESORT15 and the
14-day window once. Instagram ≤ 150 words with 5 hashtags including
#HarbourResortLinen; Facebook ≤ 90 words with the tracked link from the brief.
Use British spelling. Prices in S$ including 9% GST. Do not invent facts,
reviews, awards or sustainability claims. No urgency tricks such as 'only 2
left'.
FORMAT: Three headed sections.
```

✓ Expected: Three on-brand drafts. Compare with templates/social-posts-reference.txt.

10. Generate the post image — Same ChatGPT chat

PROMPT — paste into ChatGPT

```
TASK: Create a square 1080 × 1080 Instagram image for the Resort Linen Drop.
CONSTRAINTS: Flat lay on sand linen: a sand linen camp-collar shirt with a sea-
glass palm print, wide-leg linen trousers and a round rattan bag. Soft
daylight. Leave the top third empty for text. Add the words 'Resort Linen' in a
clean sans-serif, Harbour Navy #1B2A41. No other text, no people, no logos.
```

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

✓ Expected: A square image with clear space. If slow, use assets/images/social-resort-linen-1080.jpg.

11. Mock up the post for approval — templates/social-post-mockup.html (browser)

Open the mock-up, load your image, paste the Instagram caption. This is what Rachel approves before anything is posted.

✓ Expected: An Instagram-style post preview with your image, caption and hashtags.

12. Draft the newsletter in MailPoet — MailPoet > Emails > Create > Newsletter

Ask ChatGPT for the copy, pick a simple template, paste the copy and add the header image. Every button links to the newsletter-tagged URL. Use Preview to view it in the browser — do not send to a real list.

```
Button link: https://YOUR-SITE/product-category/apparel/?
utm_source=newsletter&utm_medium=email&utm_campaign=resort-linen
```

PROMPT — paste into ChatGPT

```
TASK: Write a launch newsletter for the Resort Linen Drop: subject line (≤ 45
characters), preheader (≤ 90), a 3-sentence opening, the four products with one
line each, the RESORT15 offer and a button 'Shop Resort Linen'.
CONSTRAINTS: Use British spelling. Prices in S$ including 9% GST. Do not invent
facts, reviews, awards or sustainability claims.
FORMAT: Subject, preheader, then the body as plain text with [BUTTON] markers.
```

13. Place a test order through the Instagram link — Private browser window

Open the Instagram-tagged link, add the Resort Linen Camp Shirt, apply RESORT15 and check out.

```
https://YOUR-SITE/product-category/apparel/?
utm_source=instagram&utm_medium=social&utm_campaign=resort-linen
```

✓ Expected: RESORT15 takes 15% off the shirt only; the order's Order attribution panel shows Source: instagram.

14. Read the campaign numbers — Analytics > Coupons · Analytics > Orders

Set the date range to today. Note orders, net sales and discount for RESORT15. Open the order and check its attribution.

✓ Expected: RESORT15 listed with 1 order and its discounted amount.

15. Ask AI to evaluate week 1 — Same ChatGPT chat

Attach data/campaign-week1.csv and paste the prompt.

PROMPT — paste into ChatGPT

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

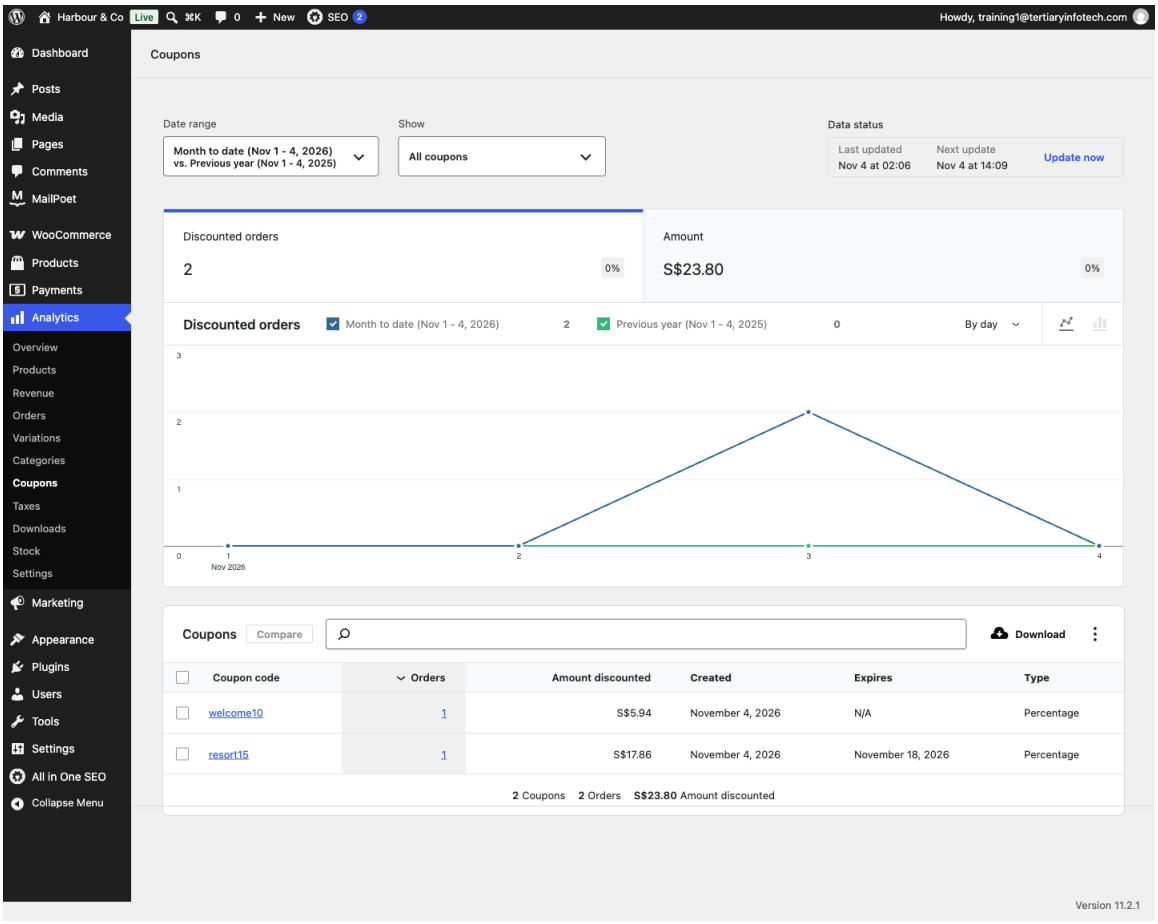

```
ROLE: You are an eCommerce performance analyst.
CONTEXT: The attached CSV is week 1 of the Resort Linen Drop by channel:
sessions, orders, revenue, RESORT15 uses, refunds, newsletter opens and clicks.
TASK: Pick the THREE metrics that best show whether the campaign works. For
each, apply four criteria — actionable, comparable over time, attributable to a
channel, tied to a decision — and say what the number tells us. Then recommend
two changes for week 2.
CONSTRAINTS: Use only numbers in the file; show your calculations (conversion
rate = orders ÷ sessions).
FORMAT: Table: metric · value · criteria met · meaning. Then two
recommendations.
```

✓ Expected: A metric review you can defend — check every number against the CSV.

Prompt Playbook — step → prompt → step → prompt

- Step 1 · YOU · Install All in One SEO
- Step 2 · AI PROMPT · Research buyer keywords
- Step 3 · AI PROMPT · Write the meta titles and descriptions
- Step 4 · YOU · Apply them to the products
- Step 5 · YOU · Set the home page meta
- Step 6 · AI PROMPT · Write alt text for every image
- Step 7 · YOU · Check the sitemap
- Step 8 · YOU · Create the RESORT15 coupon
- Step 9 · AI PROMPT · Write the social posts
- Step 10 · AI PROMPT · Generate the post image
- Step 11 · YOU · Mock up the post for approval
- Step 12 · AI PROMPT · Draft the newsletter in MailPoet
- Step 13 · YOU · Place a test order through the Instagram link
- Step 14 · YOU · Read the campaign numbers
- Step 15 · AI PROMPT · Ask AI to evaluate week 1

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Analytics > Coupons after Lab 5: the campaign coupon with its orders.

Checkpoint

Analytics > Coupons shows RESORT15 with your test order, and that order's Order attribution says Source: instagram.

- ☐ AIOSEO is active
- ☐ Home page and three products carry keyword-led titles ≤ 60 characters and descriptions ≤ 155
- ☐ Each of the four pages targets a different primary keyword
- ☐ Every product image has alt text
- ☐ /sitemap.xml lists products and pages
- ☐ RESORT15 applies to the four Resort Linen pieces only
- ☐ Social posts and newsletter were drafted by AI and approved by you
- ☐ Every campaign link carries utm_source, utm_medium and utm_campaign
- ☐ The test order shows RESORT15 and Source: instagram
- ☐ You can name three metrics and the criteria that make each worth tracking

Troubleshooting

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Symptom	Fix
No AIOSEO Settings panel on the product	Open Screen Options at the top of the editor and tick AIOSEO Settings.
The snippet preview shows the old title	Click Update, then reload — the preview reads the saved value.
ChatGPT's counts are wrong	Trust AIOSEO's counters: the title must stay under 600 pixels (about 60 characters), the description under 160 characters.
RESORT15 'is not applicable to selected products'	Add a Resort Linen product to the cart — the coupon is product-restricted.
Analytics shows nothing	Analytics refreshes on a schedule. In the Data status box (top right) click Update now, then reload the report.
Order attribution says 'Direct'	Open the tagged link in a NEW private window before adding to cart; the source is captured on arrival.
MailPoet asks to activate a sending service	You do not need to send — design and use Preview > View in browser.

Stretch challenge

Ask ChatGPT to turn the week-1 review into a 5-slide summary for Rachel, with one chart idea per slide.

Putting It Together — One Store, End to End

- Lab 1 — Launch Harbour & Co — WooCommerce Plus an AI-Designed Homepage: Your site's front page shows the Harbour & Co homepage, prices display in S$, and Users lists Daniel Koh as Shop manager.
- Lab 2 — Shoot, Write and Import the New-Season Catalogue with AI: All Products lists 11 products with your AI-photographed Classic Cotton T-Shirt among them, the polo shows S$39.90 – S$41.90, and Apparel has Shirts, Bottoms and Outerwear under it.
- Lab 3 — AI Drafts the Policies, You Switch On Payments and Shipping: Checkout shows three delivery options, two payment methods, and links to the Privacy Policy and Terms.
- Lab 4 — Run a Day of Orders — Refund, Restock, Reply with AI: The order shows WELCOME10, a refund for the tote, a stock-increase order note, and your note to the customer.
- Lab 5 — Get Found, Then Launch the Resort Linen Drop — SEO, Social, Results: Analytics > Coupons shows RESORT15 with your test order, and that order's Order attribution says Source: instagram.

Note: If you can repeat these five checkpoints on your own store, you can set up, run and market a professional eCommerce store with Generative AI.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Rebuild the Store at Home

The course repository has a docker/ folder that builds the finished Harbour & Co store on your own computer with the same plugins and data:

```
cd docker
docker compose up -d
bash setup.sh
open http://localhost:8088   (admin: /wp-admin)
```

Glossary

- **AEO (Answer Engine Optimization) —** Structuring content so search engines can lift a direct answer into a featured snippet.
- **AI Overview —** Google's AI-written summary at the top of results, citing a handful of sources.
- **Alt text —** The text alternative for an image, read by screen readers and used by image search.
- **Attribute —** A characteristic of a product such as Size or Colour. Global attributes power layered navigation and are required to create variations.
- **Backorder —** Allowing a product to be ordered when its stock has reached zero, to be fulfilled later.
- **Block pattern —** A reusable, pre-designed group of WordPress blocks — the toolkit adds five for Harbour & Co.
- **Catalog visibility —** Where a product appears — shop and search, shop only, search only, or hidden.
- **Category —** A hierarchical grouping of products. Every product must belong to at least one; unassigned products fall into 'Uncategorized'.
- **Checkout —** The page where the customer supplies their details, chooses shipping and payment, and places the order.
- **CMS (Content Management System) —** Software for creating, editing, curating and publishing web content — here, WordPress with WooCommerce.
- **Coupon —** A code that applies a percentage, fixed cart or fixed product discount, optionally with limits, restrictions and an expiry date.
- **Cross-sell —** A complementary product promoted on the cart page, based on what the customer is already buying.
- **CSV importer / exporter —** The built-in tool for creating or updating many products at once from a comma-separated file.
- **Downloadable product —** A product delivered as a file after purchase, with an optional download limit and expiry.
- **E-E-A-T —** Experience, Expertise, Authoritativeness and Trustworthiness — Google's quality framework.
- **Gateway —** A payment service such as Stripe, PayPal or Square that processes the customer's payment.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- **GEO (Generative Engine Optimization) —** Earning citations and mentions inside AI-generated answers.
- **Grouped product —** A collection of related simple products that are purchased individually.
- **GST —** Singapore's Goods and Services Tax — 9% since 1 January 2024.
- **Meta description —** The ~155-character summary search engines may show under the page title.
- **Meta title —** The page's clickable headline in search results — about 60 characters.
- **Order attribution —** WooCommerce's record of where an order came from (UTM source, medium, campaign).
- **Order status —** The stage an order has reached — pending payment, processing, completed, on hold, cancelled, refunded or failed.
- **PDPA —** Singapore's Personal Data Protection Act 2012 — the basis of the store's privacy policy.
- **Permalink / slug —** The URL-friendly version of a name, used in the address of a product, category or tag.
- **Product Data panel —** The metabox on the product edit screen holding the General, Inventory, Shipping, Linked Products and Attributes tabs.
- **Prompt —** The instruction you give an AI model: role, context, task, constraints and output format.
- **Related products —** Products shown automatically because they share categories or tags with the current product.
- **Restock —** Returning refunded items to inventory so the stock figure stays accurate.
- **Shipping class —** A grouping of products that share a shipping cost — for example bulky or fragile items.
- **Shipping zone —** A geographic region with its own shipping methods and rates.
- **Shortcode —** A bracketed tag such as [woocommerce_cart] that renders WooCommerce content inside a post or page.
- **Simple product —** A standard shipped product with no options — the majority of a typical catalogue.
- **SKU —** Stock Keeping Unit — the unique internal code identifying a product or variation.
- **Storefront —** The official WooCommerce theme, built to work with every core feature.
- **Tag —** A flat, non-hierarchical label used to relate products across categories.
- **Taxonomy —** A way of grouping content. WooCommerce adds product categories, tags and attributes to WordPress.
- **Up-sell —** A higher-value or better-quality product recommended on the product page instead of the current item.
- **UTM tags —** utm_source, utm_medium and utm_campaign added to a link so analytics can attribute a visit or sale.
- **Variable product —** A product with variations, each of which may carry its own SKU, price, stock level and image.

- **Variation —** One purchasable combination of a variable product's attributes, for example Size = Medium, Colour = Black.
- **Virtual product —** A product that requires no shipping, such as a service.
- **Widget —** A block of content placed in a theme's widget area — product lists, filters, categories, cart or search.
- **WooCommerce Blocks —** Gutenberg blocks that display products by category, tag, attribute, rating or sales inside any post or page.
- **WordPress AI Connectors —** Settings > Connectors (WordPress 7.0+): one place to store AI provider keys for plugins.
